To Our Friends and Customers:

In presenting to you our Annual Catalogue and Price List for 1897, we take pleasure in thanking you for the liberal patronage you have given us and respectfully ask for a continuance of the same for the future. Nothing for which money is expended makes so large a return as seed, if they are good. Nothing causes greater vexation than worthless seeds. If you wish to avoid disappointment, don't rely upon seeds peddled over the country and sold on commission, the chances are against their vegetating. The seeds we offer are best adapted for our soil and climate. We test all our seeds and take every precaution by personal supervision, that all seeds sent out by us shall be RELIABLE, FRESH AND GENUINE, but at the same time it must be distinctly understood that we sell no goods with warranty, express or implied, in any respect, and will not be, in any way, responsible for the crop. Our prices you will find as low as those of any other reliable seed house. We guarantee our weights and measures to be accurate and that our packages are well filled.

Trusting that we may be favored with your valuable orders which shall have our best attention we remain,

Respectfully Yours,

THE NEBRASKA SEED CO.

IMPORTANT SUGGESTIONS TO BUYERS.

HOW TO ORDER.

Always use the order sheet and printed envelope sent with the Catalogue when possible. Write plainly; keep a copy of your order and be sure to sign your name, postoffice, county and state, every time you write to us. If you do not receive your seeds in a reasonable time after sending for them, write us again, telling when and what you ordered, amount of money and how sent, etc.

ORDER EARLY.

As the seed season continues only for a few months in the year, there is, of course, a great pressure of business just at the "sowing season," We would, therefore, feel greatly obliged if our customers will kindly forward their orders as soon as possible after the receipt of this Catalogue, then you will have your seeds at hand for planting when you want them; besides, if you want heavy seeds in large quantities, they can be sent by freight very cheaply. We shall endeavor, in all cases, to execute all orders within twenty-four hours from the time they are received. they are received.

TERMS OF SALE.

Cash with order, or if one-half the amount of the bill be sent with the order, we will forward the goods, the balance unpaid to be collected by the Express Company upon delivery, but will not send any goods by express, collect on delivery, unless such payment has been

HOW TO SEND MONEY,

Remittances may be made AT OUR RISK by either of the following methods, viz: (1st and best) Post Office Order, (2) Draft on New York, (3) Express Co's Money Order (4) Cash by Express in amounts not less than \$5.00 (5) Registered Letters. When money cannot be sent by either of the first four methods it may be sent enclosed in a registered letter. The rate charged for Postoffice Orders and Express Money Orders is now so low that this is the very best way to remit where they can be obtained. We will bear the expense of sending money in either of these ways. Deduct the cost of the order from the amount sent. We desire to call particular attention to the fact that Express Money Orders can be obtained at all offices of the following companies: American, United States, Wells, Fargo & Co., Pacific and Adams. They are cheap and absolutely safe.

POSTAGE STAMPS.

POSTAGE STAMPS.

When notes are not obtainable, or to make proper change, we accept postage stamps (two-cent stamps preferred) the same as cash. SHIPPING INSTRUCTIONS.

When goods are to be shipped by Freight or Express, give plain shipping directions; otherwise we use our best judgment in regard to the matter.

WE INSIST

On customers informing us promptly on arrival of their orders, if not in good condition, well packed and filled exactly as ordered; also to report, after growth, the result, more especially if anything proves otherwise than what was expected.

OUR CATALOGUE,

Please show this Catalogue to your friends, and if you should receive an extra copy be kind enough to hand it to some neighbor. We will be pleased to send a copy FREE to any of your friends likely to want seeds. In return will ask you to SPEAK A GOOD WOED FOR US to your friends and neighbors. And order this season, no matter how small, secures our Catalogue for next, as soon as issued.

SEEDS BY MAIL, EXPRESS OR FREIGHT.

Our prices do not include free delivery; we will, however, mail all Vegetable and Flower Seeds, also summer Flowering Bulbs, free of charge for postage, when ordered by the packet, ounce, ½ pound, and in case of bulbs, either in single or in dozen lots, at Catalogue prices. Seeds ordered to be sent by mail and the necessary postage is not included in amount of remittance, will be shipped by express at the expense of the purchaser.

BEANS, PEAS, CORN, GRAIN AND GRASS SEEDS.

When ordered by the quart or pound, to be sent by mail, 15 cents per quart or 10 cents per pound, must be added to cover postage.

No charges for boxes, barrels or packing. Two bushel bags 20 cents each.

All shipments guaranteed to reach the purchaser safely and in good condition.

DIRECTIONS FOR MAKING A HOT-BED.

In the vicinity of Omaha, from the first to the middle of March is quite early enough to make a hot-bed, and even a little later will do well enough. The time must vary according to the latitude. Provide a quantity of fresh horse manure from the stables, and add to this, if they can be had, one-third to one-half of its bulk in leaves. Mix them thoroughly, tramping down the mass in successive layers, and form into a large pile, so that fermentation will proceed even in severe cold weather. In two or three days fermentation will be apparent by the escape of steam from the heap. Now turn again and allow the heap to remain two or three days longer, or until the second fermentation commences. Make an excavation or pit, two and a half feet deep and of a size suited to the number of plants required. The pit will be better if built up of brick, It should be made in some dry, sheltered spot, facing the south or east if possible. Hot-bed sashes are usually 6x3 feet, and one sash will generally give early plants enough for a large family. The frame for sashes should be eighteen inches high at the back and twelve inches in front, which will give the proper slope to catch the sunlight. Cross pieces should be placed for the sashes to slide on, to facilitate opening and shutting the frames. When everything is ready, the manure is placed in the pit and trodden down firmly in layers to the required depth, two to two and a half feet. Then put on the sashes, and keep the pit closed until the heat rises. At first it will probably be 100° or more, which is too hot to sow the seed in; but in two or three days it will subside to 90° or a little less, when the soil may be put on to the depth of six or eight inches. The heat may be readily ascertained by plunging a thermometer in the manure. The soil should be of well-rotted sod (or common garden soil will do) mixed with about a third of fine, old manure, and in this the seeds may be sown thinly in drills two or three inches apart, and afterwards (as soon as out of the seed-leaf) eithe

NOVELTIES AND SPECIALTIES OF STERLING MERIT.

HENDERSON'S AUTUMN KING CABBAGE.

COPYRIGHTED BY PETERHENDERSON &Co. Henderson's Autumn King Cabbage.

HENDERSON'S AUTUMN KING CABBAGE—A new strain of late Cabbage which is highly spoken of by all market and family gardeners who have thus far tested it. The heads are of enormous size and very solid. It has few outer leaves, as shown in the accompanying illustration, and owing to this fact it is claimed that "Autumn King" will produce a greater weight of crop from the same space of ground than any other late Cabbage.

Banquet Musk Melon.

BANQUET MUSK MELON—"The Banquet" is a medium sized melon, flat at both ends and more beautifully netted than any known variety. In quality it has no equal, the field is uniformly deep and of that granulated character that always indicates a good melon; the color is a dark, rich salmon. We are safe in saying that it will produce more fine, editle melons to a given area than any other variety.

THE N. S. CO'S FAVORITE PEA

The N. S. Co's Favorite Pea.

THE N. S. COS FAVORITE PEA.—This new second early Pea, introduced by us last year, has given unanimous satisfaction to those who planted it, and we ask every market gardener to give this variety a trial. The seeds are white wrinkled, of vigorous growth; height, 2½ feet; branching habit, prolific; pods large sized, which grow in pairs well filled with large Peas of fine quality, and first class.

JONATHAN PUMPKIN-This new Pumpkin is one of the finest varieties grown. It is very sweet and fine for pies.

MAM. WHITE BUSH SCALLOP SQUASH.

MAM. WHITE BUSH SCAL-LOP SQUASH -The great improvement in size has been effected by careful selection. The Squashes are very uniform in shape and wonderfully prolific. They are fit to use very early, and are of a beautiful white color, and grow to an immense size-twelve to fifteen inches across.

Mam. White Bush Scallop Squash.

Green Fleshed Osage Musk Melon.

GREEN FLESHED OSAGE MUSK MELON—The green-fleshed Osage is the result of several years' careful selection, being a sort to which our attention was called by fineness of grain. intense sweetness and the bright green color of flesh. It is very hardy and very prolific, and in size and shape is very like the red fleshed Osage, but is bright green before ripening instead of the black green of the Osage. In ripening it turns to a bright yellow, retaining its green color in the grooves, while its flesh becomes a beautiful pea green. We have had ample opportunities of noting its quality, and, in our judgment, it is superior to any other green fleshed Musk Melon in quality, while in closeness of grain it has no peer in its class. It is sure to take its place at the head.

DREER'S BUSH LIMA BEAN—Dreer's Improved Pole Lima, or, as it sometimes called, "Potato" Lima, has been grown for years, the beans growing close together in the pods, and being very thick, sweet and succulent, and generally considered of finer quality than the Large Pole Lima. This bush form is entirely fixed in its character growing from one and one-half to two feet in height and of vigorous habit. This variety, from its abundant foliage, always succeeds better in a dry than in a wet season, and we would advise, if possible, in planting to plant it at least two feet apart and on light, sandy soil, if practicable.

Those who buy the ZIGZAG EVERGREEN will thank us for having given it prominence. The illustration (taken from a dried ear) gives a good idea of its character. It is, perhaps, enough to say of it that it is the sweetest of all sweet corn. It is by all odds the best variety for private use, market gardeners and canners. Where known it commands a higher price than any other sort.

BURPEE'S ALL-HEAD CABBAGE.

BURPEE'S ALL-HEAD CABBAGE—tt is the earliest of all large Cabbages. It is fully one-third larger than the Early Summer, and therefore, much more profitable, being larger and at the same time earlier. Uniformity: Selection has been constantly made to secure the deepest, largest, early heads, with the fewest loose leaves; consequently

largest, early fleats, with the fewest loose leaves; consequently the heads are remarkably solid and uniform in color as well as in shape and size. It surpasses all others. Tenderness is the result of rapid growth, and as the All-Head Early comes in quicker than any of the other flat Cabbages, it is consequently more tender. Adaptation: While Burpee's All-Head Early is all that can be desired for earliness, it is also valuable for a late or Winter Cabbage. To winter well the heads must be deep or thick through—a prominent feature of this variety. By reason of the compact habit of growth of the All-Head Early and absence of loose leaves, fully one thousand more heads can be obtained to the acre than of most other varieties of good size. Ninety-five per cent. of which, in an ordinary season, and with reasonable cultivation, will make good merchantable heads.

LONG BRIGHTEST SCARLET RADISH-A new variety having several valuable advantages which may be summed up as follows: Extra-

ordinary earliness, the roots being fit for use about 25 days about 25 days after sowing; re-markably bright color, quite uni-que, being the most firey scar-let in any kind of radish; it is very slightly tipped white and the flesh is crisp and tender. In shape it is very regular, somewhat coni-cal, and in size it cal, and in size it is intermediate between the long and the half and the long sorts.

PRIZE TAKER ONION.

PRIZE TAK-ER—This new and handsome variety is a splendid type of the celebrated Spanish on-ions which are annually im-ported into the United States from Spain and

United States from Spain and sold in our large cities. The onions grown here quite rival the imported ones in great beauty

and enormous size, weighing in many cases from 3 to 3 ¼ lbs each. Hund-reds of growers

agree in pro-nouncing it the largest, hand-somest and

most wonderful variety they
have ever
grown. The out
side skin of a rich yellow color, while the flesh is white, and so sweet, mild and tender that they can be eaten like an apple.

HILL'S FORCING WHITE SPINE.

HILL'S FORCING WHITE SPINE—Originated by Mr. C. L. Hill, of Mass., who had obtained almost a monopoly of the early markets in Boston by reason of the earliness, and evenness of his cucumbers. We highly recommend this variety, not only for forcing, but also for open ground culture. This new sort is a strain of remarkable perfection of finest form, and dark green color-

The Melrose Muskmelon.

THE MELROSE MUSKMELON.

THE MELROSE MUSKMELON-This new melon is a very hardy, strong, and vigorous grower, the vines remaining green longer than any other variety. The melons are produced abundantly, and very close to the hill. The color is rich, dark green; the shape is oval, as shown in the illustration. The melons average in weight about four pounds, and are finely and densely netted. showing but slight tendency to rib; the form is remarkably perfect and true; all-in-all, the handsomest and most showy of all melons. The flesh is very thick and solid; clear, light green in color, shading to a rich salmon at the seed cavity. In flavor this, The Melrose, cannot be equaled by any other variety, and carries its superior quality and sweetness to the extreme edge of the skin. It is about one week later in ripening than Jenny Lind, and it can be said of this superb new variety that it will produce more good, salable melons, "hold up" longer, stand more handling and rough usage than any other known, thus making it the best and most desirable, either for home or market purposes.

FOR PRICES SEE PAGES 54 TO 57.

FORDHOOK SQUASH

FORDHOOK SQUASH—It is described as of medium size, bright yellow outside and straw yellow inside, flesh very thick and the seed cavity small. The vine is a rapid grower, and the Squashes mature earlier than other winter varieties, and it is also very productive. The quality is the best. It is also said to be entirely free from attacks of the borer, the vine being so hard and woody as to resist them.

NEBRASKA LIGHTNING PEA

NEBRASKA LIGHTNING PEA—No extra early Pea has ever given the universal satisfaction among market gardeners that this one has. Grown alongside of other extra early varieties the Nebraska Lightning not only proved earlier but much more productive. It is an enormous bearer and ripens very early, so that the vines may be cleared off in two pickings, and the ground prepared for another crop before other early varieties come into use. The pods are very large and well filled with round Peas of fine flavor. Height, 2½ feet. Market gardeners and others can make no mistake in using his variety for their entire first early crop

COOL AND CRISP CUCUMBER

COOL AND CRISP—The cut gives a good idea of the shape of this valuable variety. It will be noticed that it is inclined to taper off at the stem end, and is generally a little pointed at the other end also. This is the most desirable shape for pickles. At the pickling stage the cucumbers are straight, long, even and slim, and until they reach their full size they are of a very dark green color, so dark that it might be almost called "black." The peculiar feature of this variety is the knobs or protuberances upon which the spines are placed, are prominent at all stages of growth, giving the cucumber a very attractive appearance. This variety is the EARLIEST AND MOST PROLIFIC OF ALL PICKLING CUCUMBERS, and is certain to become a standard sort. While primarily a pickling variety, it is also most useful for slicing, the cucumbers, when fully matured, being of good size and exceedingly tender and crisp.

ROSY GEM RADISH

ROSY GEM
RADISH—OF
EXTRA EARLY
SCARLET TURNIP, WHITE
TIPPED FORCING. This wonderful new Radish
h as won golden
opinions in all sections of the country. It is on eof the earliest
in cultivation.
Their shape is perfectly globular,
with rich, deepscarlet top, blending into pure white
at the bottom; exceedingly tender,
crisp and delicious
n ever becoming
hollow or pithy,
very desirable for
growing under the
glass and should
be planted by
everybody.

CALHOUN PUMPKIN.

CALHOUN—We gave this variety a very thorough distribution last year, and wherever heard from, it gave the highest satisfaction, everyone speaking of its superior quality. The outside color is a creamy brown; the inside flesh is a deep salmon yellow; the flesh is wonderfully thick and fine-grained, and the seed cavity very small. It cooks very yellow and makes pies of a high rich color and of the finest quality. This variety is entirely fixed in its character, every specimen being uniformly of the shape shown in

the engraving. Anyone using the Calhoun Pumpkin once will never use any other variety, so superior is it in quality.

NEW JAPANESE CLIMBING CUCUMBER.

NEW JAPANESE CLIMBING CUCUMBER—This great novelty was introduced from Japan into Europe, where it created a great sensation and was the reigning novelty, and met with a phenomenal sale. From Europe it crossed over to this country, where they are also bound to have an enormous sale. The vines are healthy, vigorous growth, with rich, dark green foliage, and throw out Strong, Grasping Tendells, which enable it to climb trellis, wire netting, brush or any other suitable support. It clings so tightly that it is not prostrated by heavy storms of wind or rain. It comes into bearing quickly and continues to set the fruits abundantly throughout the season, while the climbing habit of growth enables the hanging fruit to grow perfectly straight; of large size, from twelve to sixteen inches in length. The cucumbers are thick, exceedingly tender and of delicate flavor, of cylindrical shape, flesh pure white, skin dark green turning to brown and netted when ripe. They are of excellent quality for slicing, and when young make attractive pickles. With this variety of cubumbers, the product of a given area of ground can be increased three-fold, thus making them particularly valuable in small gardens or to grow on high priced land. The vines continue bearing until late in fall.

THE N. S. CO'S LONGKEEPER—This new Tomate has been fully tested for two seasons, and all claims made by the originator, E. C. Carman editor of the "Rural New Yorker," fully substantiated. It is of fine form, bright red color, grows to good size, early and productive. We recommend this Tomato strongly to all growers with whom keeping is a decideratum.

HENDERSON'S SUCCESSION CABBAGE.

HENDERSON'S SUCCESSION CABBAGE—This Cabbage has been thoroughly and critically tested in all sections of the country, and pronounced by all to be the finest second early cabbage yet introduced. The Succession we regard as the most valuable variety that has been introduced since the Early Summer, It is about one week later than the Early Summer, but is double the size and is so finely bred that, in a field of ten acres, every head was a perfect specimen fit for exhibition purposes. It searliness, uniform large size, solidity and sure heading qualities make it the most valuable cabbage either for private use or for market purposes.

MAMMOTH SUMMER CROOK NECK SQUASH.

MAMMOTH SUMMER CROOK NECK SQUASH-MAMMOTH SUMMER OROOK NECK SQUASH— This new strain is even earlier than the common variety, while the squashes grow to an extra large size, measuring from eigh-teen inches to two feet long, and of finest quality. Their hand some appearance commands an extra price on the market. Our trials demonstrated that it is really a decided improvement in size although not quite as crooknecked, which, for shipping, is in its favor.

THE PERSIAN MONARCH—Is decidedly one of the richest Muskmelons in quality ever yet introduced. In delicious flavor, wonderful productiveness, hardiness and distinctive handsome appearance this grand new Muskmelon is excelled by none. It grows to medium size, but owing to the great thickness of its rich salmon-colored flesh, will weigh about three times as much as any other melon of equal size. Its great productiveness is shown in the fact that our whole crop averaged seven melons to the vine.

THORBURN'S MARKET GARDEN-ER'S PRIVATE STOCK.

THORBURN'S MARKET GARDENER'S PRIVATE STOCK-A

ATE STOCK—A selected strain of Butter Lettuce, introduced by Thorburn four years ago. It has very large and solid heads, resisting the sun for a long time before running to seed. Suitable for starting under glass and transplanting in early spring, or sowing in open ground for a summer crop. Has been thoroughly tried and obtains great favor among discriminating growers everywhere.

KENTUCKY WONDER WATERMELON.

Oblong in shape, skin dark green, flesh a beautiful scarlet color, crisp and not tough, rich and sugary flavor, always firm, very solid and never mealy. Attains an average weight of forty to sixty pounds. Not a mammoth variety, but a real good, old-fashioned Kentucky melon, that has no superior for quality. The best all-round melon for home or market yet introduced

COLUMBIA BEET—The handsome appearance of this distinct new beet is well represented in the illustration herewith. The roots are of a neat turnip shape, with smooth skin and deep blood-red flesh of rich tender quality. It is ready to use very early, growing as quickly as does the Egyptian, while it does not become course and stringy, as does that variety when of large size. Compared with such famous sorts as the Edmund and Eclipse, the Columbia has proved earlier than either, and even better in quality than these two really first-class varieties. In habit of growth it is remarkably thoroughbred, the foliage being small, neat and of a rich bronze color. We are sure that market gardeners will find it a splendid variety, while its fine flavor as a table beet will delight all private planters.

RUST PROOF GOLDEN WAX BEAN.

RUST PROOF GOLDEN WAX BEAN—It is positively Rust proof. While grown side by side for several years with other wax beans, all of them more or less affected by rust, many of them completely ruined by it, this bean has remained entirely free from it. But not only is it RUST PROOF, but it is exceedingly CRISP and TENDER, with no approach whatever to stringiness, and of a most delicious flavor. Time has also proven that it is the earliest of all wax beans, Golden Wax not excepted. It is, moreover, amazingly productive. The accompaning cut is no exageration, but a faithful representation of the plant as it is usually seen if properly grown.

THREE EXCELLENT PEAS.

Best Early Cauliflower.

This grand variety has proved to be the very best early Cauliflower in cultivation. It has attained its present perfection after sixteen years selection by one grower, and is remarkable both for its extra earliness and certainty to head—in those two most important features we know no other strain 'hat can equal it. Of dwarf, compact growth, with short stalk, it bears close planting, and the leaves, growing upright, naturally protect the heads. The large, handsome heads, measuring 8 to 10 inches across, are pure, snowy white, very close compact and of the finest quality. So extremely solid and deep, nearly globe shaped, are the heads, that they weigh heavier than most, if not all other Cauliflowers of the same size. Market gardners can use "Best Early" for either early or late, with full assurance that it s impossible to procure a better or more reliable variety.

DANDY.—The finest early, the greatest yielder, the most delightful flavored Pea on earth. This grand variety is without doubt the earliest (ready to use 42 days after planting), and most productive variety in existence, growing about 22 to 28 inches high and entirely free from runners. They ripen up so uniformly as not to require over two pickings to clear up the entire crop. We highly recommend this new Pea to market gardners, truckers and private gardners.

NOTT'S EXCELSIOR—The greatest good Pea novelty in years. It is so hardy and vigorous that it may safely be planted in early spring with any smooth variety, and can be counted on for table use almost as soon, while, as every one knows, the quality of any wrinkled Pea is far superior to any smooth. Time after time they have been fit for the table fifty days from planting, with the most ordinary cultivation. Pods are square and chunky, always containing from five to seven large peas, packed so closely together in the pods that the Peas are always more square than round. It grows to a uniform height, about one foot, and is at all times very tender and of fine flavor. Seldom has any vegetable been more unanimously recommended than has Nott's Excelsior Pea.

HEROINE—Is a medium early green wrinkled pea and grows uniformly 2 to 2½ feet high, comes in between Advancer and Champion of England, and bears a profusion of large, long, slightly curved pointed pods, containing from nine to ten large peas of finest quality. Destined to eclipse Stratagem and Pride of the Market for market purposes, and being nearly as large as the Advancer, will also be more desirable than that well known variety. An immense cropper, yields double the quantity ordinary varieties do.

NEW DWARF SWEET PEA

. CUPID

A new dwarf white Sweet Pea, growing only five inches high, with very dark green foliage; blossom spure waxy-white, of full size. The dwarf plants are from 12 to 15 inches in diameter, having stems about four inches long, bearing two or three blossoms close to the end of the stem. It is a free bloomer from May to September. The large seed is white. Pkt. 10c. Oz. 35c. ¼ 1b. \$1.00.

FOR PRICES SEE PAGES 54 TO 57.

GENERAL DESCRIPTIVE LIST

____OF ____

Nebraska Grown Vegetable Seeds.

1897

mBRACING all the leading and most popular varieties, with brief directions for their culture, which will be found under their respective headings. Purchasers ordering a half-pound or a half-bushel will be supplied at pound or bushel rates; quantities less than one-half pound or one-half bushel, at one-quarter pound or one peck rates, for less than one-quarter pound or peck, ounce and quart rates will be charged; for less than one ounce, at packet rates. Bags are furnished at the following rates: Quarter-bushel, 8c.; half-bushel, 10c.; one-bushel, 15c.; two-bushel, 20c. Parties remitting with their orders will please include in their remittance the requisite amount for bags. If amount for Bags is not included in remittance, the amount will be taken out of quantity of seeds ordered.

If you are a dealer send for our General Wholesale Price List.

Market Gardeners, Nurserymen, Ranchmen, Large Planters and Clubs, who want seeds in large quantities, will save money by writing us for special prices. Estimates or information given with pleasure

SPECIAL OFFER.

We offer the following inducements to those who may purchase Seeds by the packet in quantity. These low rates apply to Seeds in packets only, to be sent by mail, postpaid:—

For \$1.00—Select packets to the value of \$1.25.

For \$3.00—Select packets to the value of \$3.75.

For \$2.00—Select packets to the value of \$2.50.

For \$4.00—Select packets to the value of \$5.25.

Packets of Peas, Beans and Sweet Corn contain 3 ounces, and Packets of Cabbage, Celery, Carrots, Radishes, etc., etc., contain the double amount of fresh seeds than as such offered in stores and handled on commission. All seeds are true to name.

Our Family Garden Collection.

35 Packets for \$1.00 Postpaid.

This collection of Vegetable Seeds embraces nearly all the standard varieties. We make this special offer simply to induce those who have never planted our seeds, to try them this year. We know when they have once been planted they will prove to be what we claim for them, and that you will find that our seeds are superior to all others. The following 35 packets of Vegetable seeds are just the thing for a family garden, and none should fail to take advantage of this liberal offer.

ARTICHOKE.

French, Artichaut. German, Artischoke.

Plant the seeds early in the spring one inch deep, and three or four inches apart, in drills one foot apart. Hoe often and transplant in the following spring to hills four feet apart, setting from one to three plants in a hill. The soil should be deep, light and rich, and the situation open and free from influence of trees. Protect in winter with proper covering. The parts used are the fleshy substance on the bottom of the scales of the immature flower heads.

LARGE GREEN GLOBE—The largest and best.

Artichoke Roots.

Well known. Cut and plant same as potatoes. They will grow and produce enormous crops in any soil or situation, yielding the largest crops in a dry open situation.

JERUSALEM-Excellent for stock.

Artichoke Root.

ASPARAGUS.

French, Asperge. German, Spargel.

Asparagus is one of the earliest spring vegetables, and would be in universal use were it not for the prevalent idea that it is difficult to grow it. We think this is a mistake, and that there is no vegetable on our list that can be produced so cheaply and easily as this. It delights in a moist, sandy soil, but can be grown in any garden by following the directions as given below: A bed 12x40 feet, requiring 75 to 100 plants should give an abundant supply for an ordinary family.

Cultuber Beds are usually formed by sitting plants one or two years old, which can be procured of us; but if you wish to grow them yourself, prepare a light, rich spot as early as possible in the spring, and after soaking the seed twenty-four hours in warm water, sow in drills one foot apart. When the plants are well up, thin to two or three inches in the row, and give frequent and thorough cultivation, and draw altitle earth into the furrows at each hoeing until they are filled. Early the next spring spade in a heavy dressing of manure, and one quart of salt to each square rod, and cultivate well until the plants begin to die down. The next season the bed may be cut over two or three times, but if this is done ALL the short shoots, no matter how small, should be cut, and after the final cutting, give a good dressing of manure, ashes and salt. The next season, and ever after that, the bed should give a full crop and be annually dressed with manure, ashes and salt, after the last cutting, and well cultivated until the plants occupy the whole space. In the fall, as soon as the tops are ripe and yellow, they should be cut and burned. The plants may also be set in the fall, if the ground is swell drained that water will not stand on it. The whole bed should be covered with three or four inches of coarse, strawy manure or other litter, which should be removed in the spring.

COLOSSAL-A well known and excellent variety.

PALMETTO—The popularity of this superior and standard variety increases each year. It excels the preceding variety in three important points; earliness, productiveness and uniformity.

Asparagus Roots

COLOSSAL-PALMETTO

BEANS.

Dwarf, Bush or Snap.

French, Haricot. German, Bohne.

Beans are tender and should not be planted until danger from frost is past, and the ground becomes warm. Plant in drills three or four inches apart, or in hills one and one-half feet apart in the row, and rows three feet apart. Hoe often, but never when wet with dew or rain, as earth will rust the leaves and injure the crop, especially in conduction.

If ordering by mail, add to the catalogue price &c per pt, and 15c per qt, for postage.

Green Podded Varieties.

Improved Red Valentine Bean,

VALENTINE IMPROVED, RED, ROUND POD—One of the oldest varieties, and yet ranks among the best; pods round, maturing in about 60 days; highly esteemed; remains longer in the green state than many other varieties; yet nearly the whole crop can be taken at one picking, making it most desirable for market gardeners; one of the best shipping beans.

BEST OF ALL.—This variety originated in Germany. Pods are long, very fleshy, succulent, stringless and of a rich flavor. This is regarded by many as one of the most valuable green podded beans for market or family use in cultivation. Large yielder, very early; beans of good size; excellent for winter use as shell beans.

MOHAWK—One of the earliest of the green pod varieties; very producti largely used in the south.

SIX WEEKS, LONG YELLOW—One of the earliest; similar to Mohawk, except in color of seed, which is yellowish drab; pods tender; good for general crop

REFUGEE OR THOUSAND TO ONE-Pods round; fine flavor; used extensively for canning.

Improved Navy or Boston Pea Bean.

IMPROVED NAVY OR BOSTON PEA BEAN—Standard variety for field culture; very productive, and used only for ordinary purposes in a dried state.

PROLIFIC TREE—For field culture; height about 20 inches, branching in all directions, thereby not being so liable to rust as other varieties; seed is white and greatly resembling the navy bean, immensely productive

WHITE MARROW-Exclusively grown as a bean for winter use; large, egg shaped, white, excellent for cooking.

Burpee's Bush Lima Bean.

BURPEE'S BUSH LIMA—Is conceded to be one of the most valuable Bush Lima of the age. The bushes grow 18 to 20 inches high, of stout growth and always erect, yet branching so vigorously that each plant develops into a magnificent circular bush from 2 feet to 3 feet in diameter. It is an immense yielder, each bush bearing from 50 to 200 of the handsome large pods, well filled with very large Beans, which are identical in size and lucious flavor to the well known large Pole Limas. By the introduction of this most valuable vegetable, the largest and best Lima Beans can now be raised in quantity at small cost.

HENDERSON'S NEW DWARF LIMA—Grows without the aid of stakes or poles, in compact bush form, about 18 inches high, and produces enormous crops of delicious Lima Beans, which can be as easily gathered as the common garden Bush Beans. It is at least two weeks earlier than any of the climbing Limas, produces a continuous crop from the time it comes into bearing until frost.

DREER'S BUSH LIMA. (See Novelties.)

Wax Podded Varieties.

RUST PROOF GOLDEN WAX. (See Novelties.)

GOLDEN WAX—This is one of the best snap beans in cultiva-tion. It is unsurpassed in tenderness and richness of flavor; more-ever, it stands high in favor as a shell bean for winter use.

DETROIT WAX—Very nardy. The very productive erect growing plants, bear their pods very near the center of the vine, but occasionally throw a stem above the leaves. Leaves large, dark green; blossoms small, white; podsstraight, flat, but thick to edge; distinctly broader than the Golden Wax. They are frequently greenish-yellow when young, but when well grown and fit for use they are of a beautiful golden wax color and of good quality. When picked along with Golden Wax and other varieties, it keeps bright and crisp long after these are wilted and unsalable, making it one of the best for shipping long distances.

BLACK-EYED WAX-The earliest wax bean in cultivation. Seed white with black markings around the eye. The pods are longer than the Golden Wax. It is very productive and a robust grower. Large and beautiful in color, very tender and of fine flavor.

BLACK WAX—One of the best varieties. The pods, when ripe, are a waxy-yellow, round and crooked: very tender, rich and productive; beans are black.

WHITE WAX-Except in the color of its seed, this variety bears a strong resemblance to the black seeded wax. Pods wax-like.

WARDWELL'S DWARF KIDNEY WAX-Vines of medium step, erect, hardy and productive. Pods long, broad, flat, and of a delicate waxy-yelow, brittle and entirely stringless. Beans white, with two shades of reddish purple more or less visible, and a distinct kidney shape.

GOLDEN EYE WAX—This new sort is one of the earliest, hardiest and most productive of all Wax Beans. The vines are strong and branching, holding the pods well off the ground. The pods are brittle, succulent, and of a beautiful golden yellow color.

Pole or Running Beans.

French, Haricots a rames. German, Stangenbohne.

These are sown in hills about four feet apart, planting five or six seeds in each hill, to the depth of about two inches. Being more tender than the Bush varieties, the planting of them should be elayed about two weeks after the usual time for planting the latter. A sandy soil suits them best, but the hills should have a liberal quantity of manure worked in previous to planting the seed.

HORTICULTURAL OR SPECKLED CRANBERRY—Is highly esteemed green, or when matured, shelled,

WHITE DUTCH CASE KNIFE—One of the earliest pole beans, very productive and of fine quality, white seed; used for snaps, is good green and dry.

SCARLET RUNNER—Well known as climber; cultivated for the beauty of its flowers, and also for a useful vegetable; flowers scarlet; very ornamental.

KENTUCKY WONDER—Vines vigorous, climbing well and very productive, bearing its pods in large clusters; blossoms white, pods green, very long, often reaching nine or ten inches; nearly round when young, and very crisp, becoming very irregular and spongy as the beans ripen. Dry beans long, oval, dun colored.

EARLY GOLDEN CLUSTER WAX POLE—This variety takes the lead of all pole beans in earliness, coming into use a week or ten days later than the dwarf Golden Wax. The beautiful golden yellow pods, which are from six to eight inches long, are borne in clusters in great profusion, and continue to bear until frost comes. It is crisp and tender, and of the most delicious flavor.

GERMAN BLACK WAX POLE-One of the best varieties either for snapped or shelled in the green state.

RED GIANT WAX-Pods long, flat and stringless; clear, waxy; yellow, tender.

Lima Beans.

KING OF THE GARDEN, LIMA-This variety is a strong and capid grower. It is the most productive of all the Lima Beans we

EXTRA EARLY JERSEY, LIMA—In appearance and size similar to the large white Lima, and it is of equally good quality. It is especially valuable on account of being two weeks earlier than the ordinary Lima.

SMALL LIMA, OR SIEVA—The seeds of this variety are flat and smaller than those of the large Lima. It is a much hardier variety than the latter, and somewhat earlier

DREER'S IMPROVED LIMA—Early and productive; very superior to flavor; an excellent variety.

Extra Early Eclipse Beet.

EXTRA EARLY ECLIPSE

—An excellant sort, about as early as the Egyptian, but we consider it better because it is larger and of much finer quality.

MITCHELL'S PERFECTION

This new variety is one of the
earliest sorts known of. It is of
rich dark blood red color, small
top, very smooth and resembles very
much the Egyptian Beet. One of
the strongest points in favor of
this variety is the fact that it does
not become bitter and stringy when
it is a little old, as others, but is
sweet and tender all the time.

BASTIAN'S BLOOD TURNIP—After the Egyptian and Eclipse varieties this is probably the earliest beet in cultivation. Shape very similar to the Early Blood Turnip.

EDMUND'S BLOOD TUR-NIP-One of the best strains of turnip beet; very tender, which quality it retains longer than most ther sorts; small-leaved, color deep red, form uniform, one of the most desirable for marketing, or for home garden.

Dewing's Imp. Bl'd Turnip Beet.

BEETS.

French, Betterave. German, Rothe Ruebe.

German, Rothe Ruebe.

Where a variety and choice of soil are at command, select that which is rather light for this crop. It must however, be thoroughly enriched. For an early supply sow as early in the spring as the ground can be properly cultivated, lay out the drills for the seed about one foot to one and one half feet apart, and two inches deep. For main crops sow the first week in May, and for winter use in June. Sow the seed thinly, When large enough to handle, thin out the plants to about eight or nine inches apart.

If ordered by mail add to the catalogue price 10c per pound for postage.

COLUMBIA-(See Nov-

Edmund's Early Turnip Bl'd.

mund's Early Turnip Bl'd.

MARKET GARD.

ENER'S.—This is a variety
very symmetrical, with small
tap root and but few fibrous
roots; color outside is deep
blood-red, inside layers of
blood-red and light red alternately. When cooked they
are a beautiful dark red
throughout, fine grained and
unsurpassed in quality. One
sowing only is necessary to
produce early beets for martet and main crop for winter
use, which is not the case with
any other variety.

DEWING'S IMPROV-ED BLOOD TURNIP—An improved variety of the Early Blood Turnip, of deep blood red color, fine form and flavor; an excellent market sort.

EARLY BLOOD TUR-NIP-A well-known standard early variety, following the above in earliness; it is of a rich, deep blood-red color, and of excellent quality.

EARLY FLAT BAS-SANO—Chiefly valuable for its earliness.

EGYPTIAN TURNIP—A standard sort, being from ten to twelve days earlier than the old Blood Turnip. The roots are large in size, and of a rich, deep crimson color.

EXTRA LONG SMOOTH BLOOD—Standard winter; tender, sweet, and a good keeper.

SWISS CHARD, SILVER OR SEA-KALE BEET—Cultivated solely for its leaves. The midrib is stewed and served as asparagus, the other portion of the leaf being used as spinach.

MANGEL WURZEL.

French, Betterave. German, Runkel Ruebe.

Sow in April and May in thoroughly ploughed, well manured soil, in drills 2 inches deep and about 18 inches apart. Thin out to 12 inches, and keep the weeds down by frequent hoeing and cultivating. The importance and value of this crop to all stock farmers cannot be over estimated, but it is fully realized and acted on by very few farmers. When the fact is considered that fifty tons of Mangel Wurzel may be grown on a single acre, thus providing fresh and healthful stock food for the winter at so small an outlay, the wonder is that every farmer does not profit by it.

Prices on all kinds of Mangel Wurzel, 5c per ounce.

NORBITION RED GIANT— One of the finest qualities in cultiva-tion; grows to an enormous size.

GOLI)EN TANKARD—A very valuable variety, of fine form and bright yellow in color.

MAMMOTH LONG RED MANGEL-More generally grown than any other sort. Roots large, quality excellent.

RED GLOBE—The root is of large size and globular form; very

large size and globular form; very productive.

MAMMOTH LONG YELLOW—Similar to Long Red, except in color.

KINVER YELLOW GLOBE MANGEL—This splendid variety possesses most distinct features in size, shape and color. It is of superb quality and an enormous cropper.

Mammoth Long Red Mangel Wurzel.

SUGAR BEETS

SUGAR BEETS.

French, Sucre Betterave. German, Zucker Rueben.

Sugar Beets are not as heavy yielders as the foregoing, but are of superior quality, containing a large amount of saccharine matter. Thousands of acres have been planted the past six years in Nebraska for the manufacture of sugar, which has proven to be a great success, and the prospects for the development of an indigenious Sugar Beet industry are decidedly bright. They are also a cheap and useful food for farm animals, especially for cattle and hogs; it will improve the milk of cows both in quantity and quality wonderfully, and will increase the growth of young hogs rapidly.

CULTURE.—Sugar Beets grow best in sandy, loamy soil. Land which is to be planted with beets, if manured with farm-yard manure, should have this coating applied in a well rotted state in the autumn, and plowed in to the depth of five or six inches. In the spring the soil should be plowed to a great depth, from eight to ten inches, and if the subsoil be at all hard a subsoil plow should follow, loosening the subsoil to the depth of twelve to fifteen inches. The surface of the soil is then reduced to the proper tilth by harrowing and if necessary, rolling to break up the clods. It should not be forgotten that much of the cultivation of the beet may be accomplished in this way before planting, and the process of seeding should not begin until the surface of the soil is in perfect condition as mentioned above. It is scarcely necessary to add that care must be taken in plowing the soil to have it in the proper condition of moisture, since, if plowed too wet it is likely to bake, and if too dry clods may be formed which will be difficult to reduce to the proper state of tilth. A field prepared as above will afford the best opportunity for growth downward, thus preventing its being projected above the surface of the soil. It will also guard the beet against the dangers of excessive moisture or drought, as stated above. Simple drills may be used for planting the seed, the opening for

VILMORIN'S IMPROVED—An improved French variety, exceedingly rich in sugar. Under average conditions it has yielded 14 tons of roots to the acre, containing about 16 per cent of sugar.

Klein-Wanzleben Sugar Beet.

KLEIN WANZLEBEN—This kind is cultivated on a larger scale than any other Sugar Beet. The root is conical, straight and even, quite large at the head and rapidly tapering. It is a heavier yielder than Vilmorin's Improved, and contains from 14 to 15 per cent

FRENCH RED-TOP SUGAR—The most generally grown sort in France, as it combines with heavy yield a good percentage of sugar. It has produced 30 tons of beets to the acre, and contains from 10 to 13 per cent of sugar. The largest yields ever known have been obtained with this variety.

LANE'S IMPERIAL—The largest and most prolific of all Sugar Beets, it can yield 35 tons per acre with a content of only 10 per cent of sugar. This variety is most used for feeding purposes.

BRUSSELS SPROUTS.

French, Chou de Bruxelles. German, Rosen Kohl.

French, Chou de Bruxelles. This is one of the most delicious of all vegetables, and of easy growth, but it is not so well known in America as it deserves. Produces on the stem small heads resembling miniature cabbages. The sprouts are used as greens, and become very tender when touched by the frost. Sow in May, and manage as winter cabbage. In the fall the leaves should be broken down so that the little cabbages will have more room to grow.

IMPROVED DWARF—A standard variety, producing compact sprouts of fine quality. It seldom fails to produce sprouts and is a good

BROCCOLI.

French, Chou Brocoli. German, Spargel Kohl.

Allied to and closely resembling the cauliflower, but much more hardy. Sow the seed in the early part of May and transplant to a permanent place in June.

sels Sprouts. EARLY PURPLE CAPE—Heads large, compact, of a violet or purple color, and of excellent quality.

Dwarf Improved Brus-

EARLY WHITE CAPE—Differs from the preceding only in color, having a creamy white tint.

CABBAGE.

French, Choux Pommes. German, Kopf Kohl.

To secure early cabbage, sow seed in the fall in boxes and winter the young plants in cold frames, or it may be sown in February or March in hotbeds. The latter plan is generally adopted in this neighborhood. The February sown plants, when large enough, should be transplanted into cold frames, and as early as the ground is in fit condition they should be planted into the garden, in rows about two feet apart and about 18 inches in the row. The late varieties should be sown about the 1st of May and set out in the garden in July. As these grow larger than the early varieties, they should be planted in rows about three feet apart, and about two feet in the row.

If ordered by mail add to the catalogue price 10c per lb. for postage.

BURPEE'S ALL HEAD-(See Novelties). HENDERSON'S SUCCESSION-(See Novelties).

HENDERSON'S AUTUMN KING-(See Novelties).

NEW EXPRESS-Produces fair sized heads in eighty to eighty-five days from sowing of seed; does not form as large a head as "Earliest Etampes," but is ahead of this variety several days. An im-portant acquisition.

EXTRA EARLY ETAMPES—This variety is certainly the earliest cabbage grown: heads pointed, solid and of medium size: seldom fails to head.

EARLY JERSEY WAKEFIELD—The favorite early variety both for market gardeners and general use: pointed heads, solid and really the best of all the early sorts.

THE CHARLESTON WAKEFIELD—This variety is a selection of the best and largest heads of the Early Jersey Wakefield, and we can offer it with confidence to those who desire a larger size than the foregoing variety. It will average about 50 per cent larger is size than the old type of Wakefield, and is only about two or three days later. days later.

EARLY DWARF FLAT DUTCH—Heads of good size and fine flavor; highly prized everywhere; stands the heat well; good for fall use also.

Henderson's Early Summer Cabbage.

HENDER-SON'S EARLY SUMMER—This variety is deservedly popular with market gardeners. It forms large, solid, round, compact heads, of excellent quality. The heads average over double the size of the Jersey Wakefield, while it matures only ten or welve days later. It is also a good reliable sort for

EARLY YORK DWARF-Am early spring and summer variety; heads small; very

tender.

FOR PRICES SEE PAGES 54 TO 57.

late crop.

Early Winningstadt Cabbage.

EARLY WINNINGSTADT—One of the surest headers grown; cone shaped and remarkably hard and solid; desirable for both early and late; quality excellent.

ALL SEASONS—This variety is certainly one of the very best fer all the year round, forming a solid and compact head of very fine quality.

FRENCH OX-HEART-An early French variety; of good size and fair quality.

VANDERGAW MIDSUMMER—This valuable new variety is the result of many years selection by Mr. Vandergaw, a noted Long Island market gardener. In some respects it resembles "All-Seasons," coming in about a week after Early Summer, making much larger heads than that well-known variety. Heads are very uniform in color and size, very solid, and in quality is all that could be desired in a

mid-summer mid-summer and winter cabbage. Long Island cabbage growers have been annually paying Mr. Vandergaw \$10 per pound for the seed; and it has never been offered before at a less price. less price.

SUREHEAD-Yery reliable cab-bage, large, round, flatened heads of the Flat Dutchtype; a good keeper and shipper, and has be-come yery popular come very popular. Pkt.

EARLY YORK LARGE — Two weeks later than the Early Dwarf York Cabbage but larger; stands the heat well.

Surehead Cabbage.

Filderkraut Cabbage.

FILDER-KRAUT-A German variety used almost exclusively in making kraut. Heads are pointed, large, and of fine quality.

FOTTLER'S IMPROVED BRUNSWICK-Ready for market soon after first early sorts; has no superior as a fall cabbage, heads low on the stump.

EARLY DEEP HEAD—A desirable second early variety. It is fully as early as the Brunswick, while the heads are as large around and considerably deeper. Leaves wrap entirely around the head and do not drop in hot weather as much as other varieties. It is also heavier, bulk for bulk, than any other second early cabbage. A splendid keeper.

Leisior Fant Lutch Cabbage.

EXCELSIOR FLAT DUTCH—A low growing variety; heads large bluish-green, round, solid, broad and flat on the top, and often tinted with red and brown. An excellent fall and winter variety and a good keeper.

THE N. S. CO.'S SELECTED PREMIUM LATE DRUM-HEAD—We recommend this sort to market gardeners and growers for shipping purposes. In good, rich soil, and with a favorable sea-son, the heads will grow to an enormous size; very compact and solid, and of excellent flavor.

Neb. Seed Co.'s Selected Premium Late Flat Dutch Cabbage.

THE N. S. CO.'S SELECTED PREMIUM LATE FLAT DUTCH—This we consider superior to any late cabbage in cultivation. It possesses all the good qualities of the Late Flat Dutch, and is a sure header. Our stock of this variety has been especially raised for us from carefully selected heads, and we think it superior to any other strain of this popular variety. We recommend this variety to every market gardener and farmer.

MARBLEHEAD MAMMOTH-Late variety, and without doubt the largest cabbage grown, heads often weighing from 30 to 40 pounds.

STONE MASON DRUMHEAD—Characterized by its sweet-ness and delicacy of flavor and by its reliability in forming a large head. Very hardy and will endure the cold of extreme northern climates.

Mammoth Rock Red Cabbage.

MAMMOTH ROCK RED—This is by far the best, largest and surest heading red cabbage ever introduced. The plant is large with numerous spreading leaves. The head is large, round, very solid, and of deep red color. Ninety-eight per cent of the plants will form extra fine heads. The best of the red cabbages.

EARLY BLOOD, OR DARK RED ERFURT—Early; heads round and solid; fine color and excellent quality.

RED DUTCH, OR PICKLING-Medium size, very hard oblong heads; good for pickling.

SAVOY CABBAGE.

French, Chau de Savoie. German, Wirsingkohl.

We desire to call special attention to this class, all the varieties enumerated below being of much finer flavor and quality than the best of other cabbages. They are particularly adapted for private use, where quality rather than quantity is desired. Grown in fall and allowed to be touched by frost it is one of the most delicious of all recordables.

NETTED SAVOY—This is the finest of the Savoy class and a general favorite. Heads large, very solid and compact, of a yellowish-green color, and like all others of the Savoy varieties, is of excellent flavor, far surpassing that of any other late cabbage.

AMERICAN L'T DRUMHEAD SAVOY—Head large, round, compact; excellent for winter use. Select quality.

GREEN GLOBE SAVOY-Early, very tender and sweet.

CARROTS.

French, Carotte. German, Moehren.

For the successful cultivation of this root the soil should be light (sandy soil is best) and deeply tilled. For an early crop the seed should be sown as early as the ground can be properly worked. For later crops it may be sown any time until about the middle of June. Sow in rows about fifteen inches apart. Keep weeds down. Thin out young plants as soon as they can be handled, leaving them about 3 to 5 inches apart.

If ordered by mail add to the catalogue price 10c per lb. for postage.

EARLY FRENCH FORCING— The earliest variety and one largely grown for forcing purposes, It makes a small, almost globe-shaped root of an orange-red color.

Ely Searlet Horn Carrot

EARLY SCARLET HORN, STUMP ROOTED—A fine variety of medium size; color deep scarlet; fine flavor.

HALF LONG SCARLET CARENTAN-A good early variety, suitable for forcing; color deep orange. Almost without core.

Early Half-Long Scarlet. Stump-Rooted Carrot.

EARLY HALF-LONG SCARLET, STUMP-ROOTED—An excellent variety for market gardeners; color scarlet; good for shallow soil.

chantely for harder gatelets. Sand the work perfect and uniform in shape; smooth and a heavy yielder. It is fine in texture and easily dug; the flesh is of a beautiful deep-orange, solid, tender, and of excellent flavor. One of the very best for table use.

IMPROVED LONGORANGE

—A well-known standard sort, roots
long, thickest near the crown, tapering regularly to a point; color deep
orange, suitable for the table and
main field crop.

DANVER'S—There is no variety grown which will produce so much to the acre, with a minimum length of root, as this one. Under proper conditions of soil and cultivation, it may reasonably be expected to produce, which it has done, 25 to 30 tons per acre. It is of medium length and heavy at the neck, but pointed and quite smooth; color, a rich orange.

ALTRINGHAM—Fine red; mild and good for table or stock.

I.ARGE WHITE BELGIAN
—This variety is almost exclusively
and very extensively grown for feeding stock; is the best of the whites.

Danver's Half-Long Carrot.

Guerande, or Oxheart Carrot.

GUERANDE, OR OXHEART—A new variety with short, thick roots, the diameter often exceeding the length. Specimans have been grown seven inches in diameter. Color, bright orange; sweet and fined grained; good for table or stock.

CAULIFLOWER.

French, Chou-fleur. German, Blumenkohl.

Sow in February or March in a hot-bed, transplanting the plants when large enough in another or the same frame, and gradually hardening them off, preparatory to planting them out as early as the ground is in fit condition. Any good garden soil, if thoroughly cultivated and made very rich by manuring will suit. Careful attention in the matter of watering, destroying insects, and thorough cultivation will be repaid. When heading tie the top leaves together to protect from exposure to the sun.

In Cauliflower very much depends upon the quality of the seed, and we have expended a great deal of time and money to satisfy ourselves where we could obtain the best, and believe the seed we offer this year to be the best in the world. It is the product of very carefully selected heads, and grown in the sections where the best Cauliflowers in the world are produced, and consequently is high priced, but we think it really the most economical and best to buy, as every plant, with good culture, will produce a good head.

BURPEE'S BEST EARLY—(See Novelties.)

BURPEE'S BEST EARLY-(See Novelties.)

Henderson's Extra Selected Early Snowball Cauliflower. HENDERSON'S EXTRA SELECTED EARLY SNOW-BALLI—One of the best types of Cauliflower in the market. If planted March 1, large sized heads will be produced early in June, and scarcely a single head will fail to form. The outer leaves are short, so that the plants may be set from eighteen to twenty inches apart. Its compact habit of growth renders it a peculiarly profitable variety to force under glass, and it does well for late planting. Our stock cannot be excelled in onality. not be excelled in quality.

Selected Early Dwarf Erfurt Cauliflower.

SELECTED EARLY DWARF ERFURT, TRUE—This stock was obtained from one of the most careful growers in Germany, and is the finest of early Cauliflowers. Remarkable for reliability in heading; scarcely a plant fails to produce a good head. Very dwarf, solid, pure white heads. We especially recommend this selected stock to market, gardeners. market gardeners.

EARLY DWARF ERFURT—A favorite early market variety, for forcing or open ground; large, compact, solid, pure white heads of fine quality.

VEITCH'S AUTUMN GIANT—A distinct and valuable late rariety. The heads are very large, beautifully white, firm and compact, and being well protected by foliage, remains a long time fit for see. The plants should be started and transplanted early in the season, to insure their full developement.

EXTRA EARLY PARIS—Head rather large, white and compact, stalk short.

LENORMAND'S SHORT STEMMED-A French variety, very fine, large, late and of good quality.

6 LARGE ALGIERS-An extra fine variety for late sowing.

CELERY.

Sow in April and May, and rake the seed in lightly; water, and shade from strong sun. Prepare trenches two to four feet apart, a foot wide and a foot deep; dig into the bottom plenty of well rotted manure, and set the plants when they are three to four inches high six to eight inches apart in each trench. Keep them shaded until started, and gradually earth them up as they grow. Set them from May to July.

Kalamazoo Celery

KALAMAZOO—This variety is perfectly distinct and is of a beautiful cream throughout, attains a very large size, is of quick growth, stiff, close habits, is remarkably solid, thick and closely set, and is especially valuable variety for the market. It is also a first class keeper. For the use of hotels, restaurants and other large establishments it is unequalled.

WHITE PLUME—Unlike all other varieties, this one does not require to be earthed up, but if only loosely tied, or a few handsful of earth brought close around the base of the leaves to keep them close together, all the inner leaves or thin stalks will turn white and crisp.

GIANT WHITE SOLID-Large, round, crisp and solid, the old

well known variety.

SANDRINGHAM DWARF WHITE—A well known and very superior variety, of fine flavor, and firm texture.

GIANT PASCAL—This variety is a selection from the new Golden Self-blanching Celery which has become so popular in the last few years; it partakes of the best qualities of that variety, but is much larger and a better keeper. It is of a nutty flavor, being entirely free from any bitter taste. It grows about two feet high; the stalks are very broad, thick and crisp, and entirely stringless; the width and thickness of the stalks are distinctive features of this variety. It bleaches with but slight "earthing up," and very quickly, usually in five or six days.

CRAWFORD'S HALF DWARF-It stands very high among the market gardeners; it is seldom hollow, rich flavor, and of vigorous growth.

Golden Self-Blanching Celery GOLDEN SELF-BLANCHING CELERY—Like the White Plume, this celery requires very little earthing up, and in many other respects it is similar to that favorite sort, differing, however, in color, which is yellowish, the heart being large and solid and of a beautiful

Boston Market Celery. Golden Heart Celery. GOLDEN DWARF OR GOLDEN HEART—The distinctive feature of this variety, which in other respects very much resembles the other half dwarf white kind, is its large heart of waxy, golden-low stems, when fully blanched. These are also crisp and quite solid, and of excellent flavor. As a keeper in winter it has no superior.

HENDERSON'S HALF DWARF—The leading market variety, of medium growth, excellent in quality and a good keeper.

BOSTON MARKET-Dwarf in habit, white-stemmed, flavor ex-

cellent, a good keeper. RED SOLID CELERY—This is a large, quick-growing variety, solid, crisp, and possessing a marked nutty flavor, very hardy, a good keeper, and remains solid to the last; the best of the red varieties.

CELERY FÖR FLAVORING

CELERIAC.

Turnip Rooted Celery.

A variety of celery having turnip-shaped roots, which, when cooked and sliced in vinegar, makes a most excellent salad. It is more hardy and may be treated same as celery

Giant Erfurt Turnip Rooted Celeriac.

GIANT ERFURT TURNIP ROOTED-A good variety for salad, soups, etc.

LARGE SMOOTH PRAGUE—This is the largest and best variety grown, and grows to a large size, round in shape, smooth, with few side roots.

CHICORY.

French, Chicoree. German, Cigorien.

LARGE ROOTED OR COFFEE—Sow in drills, the roots become well developed. When they are dried, roasted or ground, they become the Chicory of commerce, and are used in adulterating coffee.

COLLARDS.

French, Chau. German, Blaetter-Kohl.

Sow in succession from June to August, and treat as cabbage, in rows one foot apart.

TRUE GEORGIA-

CHERVIL.

French, Cerfeuil. German, Gartenkerbel.

By many this is preferred to parsley for garnishing, and its aromatic leaves are much used for seasoning and in salads. Sow early in spring, in rich, well prepared sandy soil, and when plants are well established transplant to about one foot apart.

CURLED—The young leaves are used in soups and salads. Sow in May in drills half an inch deep.

CORN SALAD OR FETTICUS.

French, Mache. German, Feldsalat oder Rabinschen.

Sow early in fall or first of the spring, in shallow drills, about twelve inches apart. Cover lightly, and if very dry, occasionally water. To protect through the winter, cover with straw or light evergreen brush. It is used as salad, and is esteemed very highly on account of its very early appearance in the spring.

Corn Salad.

LARGE LEAVED-The best variety cultivated.

CORN.—Sweet or Sugar.

French, Mais. German, Welschkorn.

Plant in hills three feet apart, and leave four plants to the hill. Plant at intervals of ten days from early spring to middle summer, which will insure a constant supply of green corn throughout the season.

If ordered by mail, add to the catalogue price 8c. per pt. and 15c. per qt. for postage.

ZIG ZAG EVERGREEN—(See Novelties.) FIRST OF ALL—This new Sweet Corn is the earliest of all, it is a week earlier than the Cory and of superior quality. The ears are of medium size, very full, sweet and of a delicious flavor.

EXTRA EARLY ADAMS—The hardiest and earliest variety for table use, but not a sweet corn, white grain and short ear, stalks three to four feet high.

EARLY MARBLEHEAD—One of the earliest varieties of Sweet Corn, dwarf in habit, the ears, which are of very fine flavor, are of a fair market size, and set very low down on the stalk.

EARLY CORY—A variety resembling the Marblehead in appearance, but larger and a few days earlier. One of the best for market gardeners.

EARLY WHITE CORY—A selection of the Cory, of the same character in all respects, except that it has a white cob and kernels. Very early and a good variety.

CROSBY'S EARLY SWEET—Early, and a great favorite in the market; rather small ears but productive and of excellent quality.

EARLY BONANZA, SWEET OR SUGAR—This variety is as early as any Sweet Corn, with very large ears, white kernels; its table qualities are unequaled in rich sugary flavor.

EARLY MINNESOTA SWEET—An extra early variety; very productive and of excellent quality.

HONEY SWEET-A most desirable variety, very sweet, as the name implies, and very productive.

COUNTRY GENTLEMAN (Medium Late)—Of recent introduction, and possesses all the superior qualities of the Shoe Peg variety, viz: the deepest grain, smallest cob and richest flavor of all Sweet Corns, and resembles it in every other respect except that the ears are nearly twice as large. Notwithstanding the greater size of the ear, it is fully as productive, producing three to four good ears to the stalk.

HICKOX IMPROVED SWEET—Of medium earliness, and is valuable alike in the market, family garden, or for canning, for which latter use large areas of it are grown. The ears are twelve-rowed; quality of the very best.

SHAKER'S EARLY—The kernels are large, of pearly whiteness, and delicious flavor. It is quite as early as the Minnesota and the ears are much larger.

BALLARD'S EARLY OR CHICAGO MARKET—This is one of the best of the early varieties, having all the good qualities of the later sorts, and is nearly as early as the Adams.

MOORE'S CONCORD—A good second early variety, excellent for market or family use, ears large and flayor unsurgassed by any of the earlier varieties.

RUSSELL'S PROLIFIC—A very superior early variety, the sweetest of the early sorts. Ears 8 to 10 inches long.

POTTER'S EXCELSIOR OR SQUANTUM—An excellent variety, with fine large ears and deep grain, early.

PERRY'S HYBRED—A very fine early variety, fully as early as the Minnesota and ears much larger, each containing twelve to four-teen rows of kernels, well filled to the end.

OLD COLONY—A very old sort, which has been revived and sold under the name of Landreth's Sugar and other names. Stalks six feet high, very productive, ears large, oval with sixteen to twenty irregular rows.

BLACK MEXICAN—Although the ripe grain is black, or bluish-black, the corn, when in condition for the table, cooks remarkably white, and is surpassed by none in tenderness.

STOWELL'S EVERGREEN—This variety is more largely planted than any other, being the general favorite with canners and market gardeners for late use. Our stock is very fine and specially recommended to truckers and canners.

MAMMOTH LATE—This produces the largest ears of any Sweet Corn, a single ear sometimes weighing as much as two or three pounds. It ripens a little later than the Evergreen and the cobs are larger, the kernels being flatter, not horse-tooth shaped.

SWEET FODDER-Only used for ensilage and fodder purposes.

CUCUMBERS.

French, Coucombre. German, Gurken.

Plant in hills four feet apart, in well prepared, warm, rich, loamy soil. Mix a shovelful of well rotted manure in each hill. The fruit should be picked when large enough, whether wanted or not, as it destroys the vitality of the vine if left to ripen.

Improved White Spine Cucumber.

If ordered by mail add to the catalogue price 10c. per pound for postage.

HILL'S FORCING WHITE SPINE -(See Novelties.)

COOL AND CRISP - (See Novelties.) JAPANESE CLIMBING-(See Novelties)

IMPROVED EXTRA EARLY WHITE SPINE-This is a favorite variety, producing fruit from six to eight inches in length, and two to three inches in diameter. of a handsome deep green, flesh crisp and of fine flavor. Good for forcing and out doors.

IMPROVED EXTRA LONG WHITE SPINE-A large variety of White Spine, largely used for forcing by market gardeners.

ARLINGTON WHITE SPINE—The young fruits are of a darker color and more pointed. It is a favorite sort with pickle manufacturers, giving a very small proportion of malformed fruit.

WHITE DUTCH—This fine variety from Germany grows to large size, perfectly smooth, and is of excellent quality and superior flavor. In beauty of form it is not equaled by any other cucumber, which renders it especially valuable for exhibition purposes.

EARLY FRAME OR SHORT GREEN—An excellent variety for pickles when young.

EARLY RUSSIAN—The earliest variety; fruit small and hardy; very productive.

THORBURN'S EVERBEARING—A small variety, very early, enormously productive and valuable as a green pickler. The peculiar merit of this sort is that the vines continue to flower and produce fruit until killed by frost, whether the ripe cucumbers are picked off or not—in which respect it differs from all other sorts in cultivation. Cucumbers in every stage of growth will be found on the same vine. the same vine.

Extra Early Siberian.

Absolutely the earliest cucumber known, producing fruits five inches long, in the open ground, from seed, in fifty-five days. It is without question a remarkable variety, and will be a surprise to market gardeners and truckers, who heretofore have grown the early Russian for earliest. Size of the new Siberian Medium, is what a critical gardener would call just right. A splendid free bearer; fruits straight and smooth; flesh extraordinarily tender and crisp; and for early forcing purposes, or for slicing, it is a most valual le addition to our list of cucumbers.

EVERGREEN WHITE

EVERGREEN WHITE SPINE—Longer than the Peerless, of fine quality for family use. When about five inches long makes a good pickle.

EARLY CLUSTER— Early, short and prickly; bears mostly in clusters.

BISMARCK—A cross be-tween the White Spine and Long Green; established by careful selection. Fruit long, cylindrical, very hand-some, and constant in form and color; flesh very crisp and tender.

BOSTON PICKLING— An early short variety, of good form and very pro-ductive, one of the best for pickling.

GIANT OF PERA — Of the most delicious flavor; no other cucumber we have no other cucumber we have ever eaten surpassing them. Very crisp and tender and can be eaten at any time during growth. Of enormous size, frequently growing to 1½ ft. in length; very smooth and straight, without spines, and of a beautiful green color. The vines grow vigorously; fruit set near the hill and closely together; exceedingly prolific.

WHITE PEARL CUCUMBER—A new variety, introduced 4 years ago. In habit of growth it is entirely distinct, setting the fruits very close to the stem; uniform in size and shape and immensely productive. In color they are a beautiful pearly white. The skin is smooth and entirely free from spines; they are solid, tender and crisp in taste, and of splendid quality for slicing.

NICHOL'S MEDIUM GREEN-An excellent pickle variety; color dark green; flesh crisp and tender; of medium size and very productive. Always straight and smooth. It is also good for forcing.

PEERLESS WHITE SPINE-One of the finest strains of White Spine. Fruit of large size, straight, productive, skin deep green, holding color until maturity.

IMPROVED LONG GREEN-A fine long fruit of excellent quality dark green, firm and crisp.

Improved Long Green Cucumber.

Chicago Pickling Cucumber.

CHICAGO PICKLING—One of the best varieties for pickles, and largely grown for the Chicago market.

GREEN PROLIFIC—Enormously productive; crisp and tender. One of the finest for pickles.

West India Gherkin.

SERPENT, OR SNAKE—A remarkable and very interesting curiosity. The Cucumbers grow curied up like a snake with the head protruding; and sometimes are six feet in length. The illustration represents their shape, and although they attain great size, the quality is only fair; grown more as a curiosity than anything else, and to exhibit at fairs.

WEST INDIA GHERKIN-Oval shaped; prickly, for pickling only.

CRESS.

French, Cresson. German, Kresse.

The Peppergrass sow early in spring, in shallow drills, and every two or three weeks for a succession, cut often, as it will continue to grow. The winter Cress can be sown early in spring or in autumn, in drills one foot apart and thinned out to about three inches in the drill. The Water Cress must be sown on the margin of a stream of running water, or in a very moist location.

CURLED, OR PEPPER GRASS-Common and well known.

TRUE WATER CRESS-Leaves tender and highly flavored.

DANDELION.

French, Pisse-en-lit. German, Loewenzahn.

The Dandelion resembles the Endive, and is sometimes cultivated for spring greens, or by blanching for salad. The roots when dried and roasted, are often used as a substitute for coffee. The seed should be sown in May or June, in drills half an inch deep, and twelve inches apart. Plants are ready for use the following spring.

I.ARGE LEAVED—Leaves are fully double the size of the com-n Dandelion. It is a great advance over the old variety.

EGG PLANT.

French, Aubergine. German, Eierpflanze.

Sow in hotbeds very early in the spring, and transplant to two or three feet apart, in very rich, warm ground. Hoe often, and hill up gradually till they blossom. For want of hotbeds sow the seed in window pots early in the spring, or later, in a warm, light sheltered piece of ground. piece of ground.

IMPROVED NEW YORK PURPLE—The best variety in culrutation, being early, a sure cropper and of fine quality. Plants large, vigorous, with light green leaves; fruit very large, oval, deep purple; flesh white, tender and of superior quality. quality.

EARLY LONG PURPLE— Earliest and most productive; fruit long, dark, rich purple, and of fine quality.

N. Y. Improved Egg Plant.

BLACK PEKIN—The fruit of this handsome variety is jet black, ound in form and very solid; quite early, and a very superior variety.

ENDIVE.

French, Chicoree. German, Endivien.

Sow in August in shallow drills, twelve to fifteen inches apart, and thin to one foot in the drills; when fully grown, tie over the outer leaves of a few plants, every week or ten days, to blanch. Draw a little earth to the base of the plants. An open situation is most

Moss Curled Endive.

ENDIVE, WHITE CURLED-Self-blanching; very fine flavored and tender.

GREEN CURLED-Leaves curled; dark green, crisp and tender; early blanched.

FRENCH CURLED MOSS-Handsomery curied; fine quality, a desirable sort

BROAD LEAVED BATAVIAN-Used in soups and stews.

GOURDS.

French, Gourde. German, Zier Kuerbis.

The following varieties will be found useful for household and farm purposes. An illustration of the variety, with instructions for growing, printed on each paper of seed.

For ornamental varieties of Gourds see Flower Seeds.

NEST EGG GOURD, JAPAN ESE—As they exactly resemble, in color, shape and size, the eggs of hens, do not crack, and are uninjured by cold or wet, they make the very best nest eggs. The plant is a rapidly-growing climber, and is useful for covering screens, etc., behite eggs.

Nest Egg Gourd. covering ing quite ornamental, with the numerous white eggs.

DIPPER
GOURD—When
grown on the
ground the stems
will be curved, as
shown in the engraving, while if
raised as a climbing vine, on a trellis, the weight
of the blossom
end will cause
the stem to grow
straight. They
are very easily
prepared for use
as dippers, will
lastforyears, and
are particularly
valuable for dipping hot liquids
—the handles do
not readily become hot. Dipquart and a half, Dipper Gourd pers of various sizes, of a capacity from a pint to a quart and a half, can be had from a few vines.

HORSERADISH.

The best horseradish is produced from small pieces of root; these are to be set small end down so that the top will be two inches below the surface. The soil should be very rich and well cultivated. It is also grown, but of inferior quality, from the crown of old plants. It is hardy and may be left in the ground until spring before digging. We frequently receive orders for the SEED of this vegetable, but we can supply the roots only.

KALE OR BORECOLE.

French, Chou Vert. German, Blaetter-Kohl.

The Kales make excellent Greens for excellent Greens for winter and spring use. The Tall and Dwarf Green Curled are sown about the end of spring, and then transplanted and cultivated like cabbage. The Dwarf German Greens are hardy, and for spring use are sown as late

use are sown as late
as September, in
drills a foot apart, with slight protection stand the winter, and are
improved rather than injured by frost.

DWARF GREEN CURLED—A sort of special excellence, being very fine curled variety of yellowish-green color, growing very close to the ground.

GREEN CURLED SCOTCH—Grows about eighteen inches in height and spreads; the leaves are bright green, beautifully curled.

DWARF CURLED KALE, GERMAN GREENS OR SPROUTS-More hardy than cabbage, and makes excellent Greens for winter and spring use.

BROWN GERMAN CURLED—Similar to the Scotch, except the color, which is of a dull purple; most esteemed by the Germans.

KOHLRABI.

French, Chou-rave. German, Kohl-Rabi.

A popular vegetable intermediate between the Cabbage and the Turnip. Cultivation same as directed for Cabbage, taking care to set the plants no deeper than they stood in the seed bed, and in hoeing not to heap much earth about them.

EARLIEST WHITE VIENNA—The earliest and best for forcing; very tender; excellent for table use.

EARLIEST PURPLE VIENNA—Differs from the Early White Vienna only in color, which is of bluish-purple.

GIANT GREEN—A good variety for summer and fall use; grows larger than the Vienna. White Vienna Kohlrabi.

Early

LEEK.

French, Poireau. German, Lauch oder Poree.

In our opinion the Leek does not receive the attention it deserves. It is easily cultivated, and is a valuable addition to the vegetables generally used in soups, etc. Sow early in the spring, and when about eix inches high transplant into rows about ten inches apart each way, and as deep as possible, to perfect the blanching process. The richer the soil the finer the Leeks will grow.

Large Musselburgh Leek.

MUSSELBURGH—Grows to a large size.

LARGE ROUEN-An excellent large variety.

LARGE LONDON FLAG—Broad leaves growing on both sides, of strong and vigorous growth.

LARGE AMERICAN FLAG-A favorite market variety.

LETTUCE.

French, Laitue. German, Salat.

For an early crop, sow under glass in February, and transplant on a well prepared bed, in some sheltered corner, in April. For successional crops, sow in beds of well pulverized soil in March, and at intervals of about a fortnight until the end of May. When sown for cutting young, the seed may be put in rather thick, in rows, or broadcast, but to have finer heads, it should be sown thinly in rows, and transplanted a foot apart in the richest soil.

THORBURN MARKET GARDENER'S PRIVATE STOCK -(See Novelties).

Grand Rapids Lettuce.

GRAND RAPIDS LETTUCE—Brings the highest price in every market wherever sold. It is a very compact grower, keeps toneder and crisp without waiting longer than any other variety, and is the best market forcing or hotbed lettuce yet introduced.

EARLY CURLED SIMPSON—This variety does not head, but forms a compact, close mass of leaves. It is well suited for foreing.

Black Seeded Simpson Lettuce.

BLACK SEEDED SIMPSON—Like the Curled Simpson, it does not head, but forms a compact mass of leaves, and differs in being lighter colored, stands the summer heat well, and is nearly double the size of the Curled Simpson.

LARGE WHITE SUMMER CABBAGE—A good summer variety; heads of good size, close and well formed.

EARLY TENNIS BALL, OR BOSTON MARKET—A superb variety; grows very compact, and is beautifully white and crisp.

DENVER
MARKET—
This is an early
variety of Head
Lettuce, either
for forcing or
open ground. It
forms large solid
heads of a good,
light-green color
and is very slow
to go to seed. The
leaves are beautifully marked
and blistered;
(like the Savoy
cabbage) very
crisp and tender
and of excellent
flavor. The shape
of the head resembles somewhat the "Hanson," but is more
oblong.

BUTTERCUP—A new early variety, forming solid heads of remarkable tenderness and delicacy of flavor, It is equally good for summer and winter growth.

Golden Ball Lettuce.

GOLDEN BALL
A fine variety with very
solid heads, of superb
quality and great
beauty. It is quite as
early as the White Tennis Ball, has larger
heads and is unsurpassed for table use.
We do not hesitate to
recommend it most
highly for forcing or
earliest spring crop; of
handsome appearance.

DEFIANCE— Forms a good head; remains crisp and tender during the whole sea-

son.

Blond Blockhead.

BLOND BLOCKHEAD-A very handsome lettuce forming large, solid heads of rich, golden yellow, of splendid quality and an excellent keeper after being cut, a quality which makes it a desirable sort for shipping purposes, as well as for private use. It is slow to seed and withstands summer heat well.

YELLOW SEEDED BUTTER—A very distinct sort, forming a large dense, yellow head ; very crisp and tender; excellent in flavor.

SALAMANDER—A very fine summer variety, forming fair-sized, compact heads; color light green. It stands drouth and heat better and remains longer in the head than any other variety.

ALL THE YEAR ROUND—A hardy, compact growing variety, with small, close heads of a dark green color.

Silver Ball Lettuce.

SILVER BALL This lettuce produces a beautiful head, firm, solid and compact, with handcompact, with handson mely curled leaves. It is of attractive silvery-white color, very rich, buttery, and of most delicious flavor. It comes early and stands a long while hefore running while before running to seed. An excel-lent variety, both for early spring and

summer use HANSON—A very fine heading variety of large size. The heads are very solid, sweet, tender and crisp throughout, and entirely free from any bitter taste.

GREEN FRINGED—This variety is beautifully cut and fringed and furnishes an abundance of tender leaves fit for use nearly all summer

PARIS WHITE COS-A very fine upright variety, tender and

PRIZE HEAD-It forms a large close head, very crisp, tender, and of excellent flavor. We recommend this as one of the best for family use.

HENDERSON'S NEW YORK-It forms solid heads, sometimes measuring eighteen inches in diameter. It is crisp and tender and of

BROWN DUTCH-A very desirable variety; it forms a large, solid head, the inner leaves are crisp and tender.

ST. LOUIS
MARKET—This is
one of the very best
market sorts; medium size, light
green color; very
slow to run to seed; solid heading sort.

BOSTON CURL-ED - A handsome variety, much used for garnishing; early and of good quality.

St. Louis Market Lettuce.

 $\begin{tabular}{ll} \textbf{PERPETUAL--} Does \ not \ head, but forms large, compact bushes, \\ which are crisp and tender. \\ \end{tabular}$

DEACON—Next to Salamander this variety withstands summer heat best. It forms a solid head. Tender and crisp. A good variety for general use.

MELONS-MUSK.

French, Melon. German, Zucker Melone.

The melon grows best in a light soil. Plant in hills about six feet apart, mixing in each hill about a shovelful of well rotted manure. Sow about a dozen seeds in every hill, early in May, and when well started thin out to three or four of the strongest plants. Pinch off the strong shoots and thin out the young fruit if it sets too plentifully, so as to increase the size of the remainder.

If ordered by mail, add to the catalogue price 10c per lb, for postage.

GREEN FLESHED OSAGE—(See Novelties).
PERSIAN MONARCH—(See Novelties).
JERSEY BELLE—(See Novelties).
THE BANQUET—(See Novelties).
MELROSE—(See Novelties).
EXTRA EARLY GREEN CITRON—This excellent sort is of medium size, deeply netted, of globular shape. Flesh green and of fine flavor.

PROLIFIC NUTMEG-This variety, as its name suggests, is very prolific; fruit of medium size; thick green flesh of very fine flavor.

MILLER'S CREAM-One of the most delicious melons now in use. The flesh is of a rich salmon color, very thick and sweet.

BAY VIEW—A very prelific and fine flavored green-fleshed melon. With ordinary cultivation this va-riety has produced melons weighing from 10 to 15 lbs.

NETTED GEM — A very early variety of small size. It is globe-shaped, green-flesh and of delicious flavor.

ORANGE CHRISTIANA-An excellent yellow-fleshed variety; ten days earlier than Nutmeg; of fine flavor and very early.

Miller's Cream Muskmelon.

Osage Muskmelon.

OSAGE -One of the finest flavored melons in culone of the best for the market gardener, and for the home garden. The flesh is of a rich, salmon color, very sweet and melting in quality, and is so very thick that the melon is almost solid. is almost solid, the seed cavity the seed cavity being remarkably small. Melons of good size. The rind is very this (not much thicker thas paste-board) and thickly netted. This vine is a strong

grower and very productive, covering the ground with fruit.

EXTRA EARLY HACKENSACK—Similar to the Hackensack, but about two weeks earlier, making it a valuable acquisition. The flesh is green.

THE HACKENSACK-A popular variety of large size. It is of most delicious flavor.

JENNY LIND-A medium early variety, of small size, but excellent flavor: flesh green.

EMERALD GEM—This is a most excellent variety, of superior flavor and quality. Outside skin of emerald green and smooth; flesh salmon, very thick and juicy.

Early Jenny Lind Muskmelon.

THE PRIN-CESS-A new and distinct melon of handsome appearance: it is round, large, heavily netted, heavily netted, dark green skin and thick flesh, which is a beau-tiful salmon col-or. It ripens early and has a most delicious flavor.

MONTREAL MARKET-One of the largest of the largest melon we know of, specimens having weighed over 20 lbs. Flesh green, thick and of very fine flavor.

SHUMWAY'S GIANT—This is the largest variety of Muskmelon in the world, absolutely pure. Flesh very thick, fine-grained and salmon tinted, and as to quality we know of no other variety that can approach it in deliciousness. It is entirely devoid of the rank flavor often found in large varieties of muskmelon, and is astonishingly sugary and melting, In outward appearance it is deeply ribbed, finely netted, and of immense size, weighing from 25 to 30 pounds.

NETTED BEAUTY-This new variety was first introduced two years ago and is now a favorite among melon growers, who consider it the very best Extra Early sort they have ever grown. The Melon is completely covered with a dense netting, and entirely free from any tendency to rib like other sorts. It is very productive. The flesh is pale green, very thick, sweet and high flavored.

IRONDEQUOIT—This melon is of very attractive form and color, being creamy yellow on the outside and finely netted; the flesh is a rich, salmon shade, very thick and of the finest flavor, melting and delicious. We have never seen a Muskmelon more even in size and so uniformly productive, scarcely a hill having less than eight full sized, marketable melons.

BANANA—Grows about two feet in length, banana shaped, has peculiar and very high flavor. We consider it a most valuable acquisition.

CASABA-A large variety of fine flavor; flesh very thick and

THE NEWPORT—This new Melon originated by one of the largest market gardeners in New York, it does not differ from the Hackensack except that it is a little smaller, while small it is very deep-fleshed and of a dark green color. The Newport stands in the same relation to the green-fleshed Melons that the "Banquet" does to the red-fleshed resisting.

BALTIMORE MARKET-A green-deshed variety of oblong form. A good shipping melon.

LONG YEL-LOW CANTA-LOUPE-A very large variety, ribbed and netted, salmon-fleshed, sweet and melting.

CHICAGO MARKET NUT-MEG-This variety of melon has been shown in the Chicagomarketfor the past ten years and is undoubted-by the best large green fleshed nut-meg known.

Champion Market Muskmelon.

CHAMPION MARKET—These melons are almost a perfect globe in shape and densely netted; one of the handsomest Cantaloupes known, all being very uniform in size and weight, ranging from four to five and one-half pounds each. The flesh is thick, light-green in color, and of rich, sweet flavor.

MELON PEACH-The fruit is about the size of a large peach, oval-shaped, and of abright orange color. When ripe they become mellow and sweet. and have a rich flavor. For sweet pickles, pies or preserving they are superb. They are easily cultivated, wonderfully productive; and can be used in every way, for pickles and preserves. for which they are unsurpassed.

MELONS—WATER.

French, Melon d'eau. German, Wasser-Melone.

Plant in hills 8 to 10 feet apart each way, with a shovelful of well rotted manure mixed with the soil in each hill. Put six or eight seeds in each hill, and finally leave, when danger from insects is past, but three strong plants. Hoe often; if extra large fruit is desired have but two or three melons to the vine.

KENTUCKY WONDER-(See Novelties.)

STOKE'S EXTRA EARLY—This melon is, without doubt, the without doubt, the earliest of all. Nearly round in shape, dark green skin, slightly molted with white. The flesh is deep scarlet, remarkably let, remarkably solid, and in delicious, sugary flactors is unsurpassed by any other melon. The average weight is about fifteen pounds.

Phinney's Early Watermelon.

VICK'S EARLY-Oblong, smooth, rather small; flesh bright pink, solid, sweet and the earliest melon in the market.

PRIDE OF GEORGIA—It is dark green in color and almost oval in shape. It is an excellent shipping variety, and when well grown attains a large size. It also possesses in a marked degree crispness and sweetness of flavor.

DELAWARE
—Of oblong
shape, with skin
beautifully
striped, dark,
and light-green.
The flesh is a
brilliant red, and
ripens within ½
to % of an inch
of the rind; very
solid, lucious and
sugary, entirely
free from strings
and of most excellent flavor, it
combines all the
good qualities of
a perfect Watermelon. DELAWARE melon.

GREEN AND GOLD—A very early variety; the melons are of good size, ranging from 20 to 40 pounds in weight. The rind is the thinest of any melon we have ever seen, the white being only from % to ½ inch thick. The flesh is a beautiful golden orange color, free from any tinge of white or any other color even immediately around the seeds. The flesh is beautiful, granular in appearance, junicy and sweet, and of unequalled flavor.

TRUE GEORGIA RATTLESNAKE OR GIPSY-Fruit targe, oblong, striped; flesh red, of fine quality.

Kolb's Gem Watermelon.

KOLB'S GEM—It originated with one of the largest melon growers of Alabama, and is a Hybrid of Scaly Bark and Rattlesnake. The rind, though quite thin, is very tough, standing handling and shipment long distances without breakage. The flesh is of bright red and of excellent flavor. All who have grown it agree in pronouncing it one of the largest, most productive, best keeping and shipping melons ever introduced. melons ever introduced.

DIXIE—In this we have a new water melon of excellent merits and we can recommend it to our customers as the BEST SHIPPING MELON grown, being even LARGER, EARLIEE AND FAR MORE PRODUCTIVE than the Kolb's Gem, which has heretofore been considered the best melon for shipping. It is of a very fine appearance, being much darker than Kolb's Gem and more beautifully striped; it is longer and extremely hardy, while its eating quality is unexcelled, being sweet, juicy and tender. Another very important point is its productiveness, having SIX TO EIGHT LARGE MELONS ON A VINE.

THE BOSS-This is one of the first among the earliest; very productive and of delicious flavor. In shape it is oblong, color very dark, flesh of an unusually deep scarlet, rich in sugar, delicious melting flavor.

JUMBO—The shape is round, color green with faint lighter stripes; deep-red meat, surpassing all other varieties as much in flavor as in size, and as a market melon sells more rapidly and for higher prices. They grow to weigh eighty pounds—from 40 to 60 pounds is common. It matures three to four days later than ordinary kinds.

GOLDEN HONEY-The flesh is of a deep, rich yellow color, and in delicious sweetness and rare quality reminds one of honey, be-ing without exception the sweetest melon we ever raised. In a crop of twenty acres, grown especially for seeds we failed to find a single specimen that was dry and mealy, every melon was juicy, melting and delicions. It is amount the earliest tion the sweetest delicious. It is among the earliest

Golden Honey Watermelon.

of water melons.

The rind, though
thin, is hard and tough, making it one of the very best shippers.
Used as a contrast with red flecked melons for table decorations it has
no equal. We recommend it as a new and decided acquisition.

FLORIDA FAVORITE—This variety is pronounced by all who have grown it, the finest table melon extant; oblong in shape, and growing to very large size; rind dark with light green stripes; flosh light crimson; very crisp and deliciously sweet; seed rather small and of a light creamy white color.

MOUNTAIN SWEET—Fruit, large, oblong, dark green; rind thin; flesh red, solid and very sweet.

CUBAN QUEEN—The largest and one of the best grown, often reaching 50 and sometimes 70 pounds; an excellent keeper; skin beautifully striped, dark and light green.

The flesh is red, solid, delicate in flavor and very sweet.

BLACK SPANISH-Earliest: round, skin dark green, flesh red; rich sugary flavor.

MAMMOTH IRONCLAD—Grows to a mammoth size, and possesses all the good qualities of shipping and eating; skin striped, long; very solid to the core, crisp and juicy, often attaining the weight of sixty pounds and upwards.

THE GRAGG—A new and very distinct variety, in both inside and outside appearance. Color dark green, with alternate stripes of light green, the whole being covered with a delicate tracery of dark veins. The flesh is of a delicate salmon tint, which makes it exceedingly handsome and tempting. Flesh sweet, juicy and melting, with a rich flavor peculiar to itself. Large, oblong, just about the right size for marketing. Several weeks earlier than the Ice Cream.

SCALY BARK—A popular variety, covered with mottled green spots, looking like fish scales. It will keep in good condition after picking longer than any other sort; fruit. large, oblong; flesh red and very tender.

PEERLESS, OR ICE CREAM—The best melon for general use, particularly at the north. Vine vigorous, hardy, productive; fruit medium, oval, finely mottled, light and dark green, somewhat in stripes, rind thin; flesh bright scarlet, solid to the center, crisp, nutty and sweet.

DARK ICING—A very prolific variety, of good size and delicious flavor. Oblong; thin rind.

Jordan's Gray Monarch Watermelon.

JORDAN'S GRAY MONARCH, OR LONG WHITE ICING—Although introduced by one seed house as "Jordan's Gray Monarch," by another "Long White Icing," we consider the two names synonymous, as descriptive of one variety. The skin is of an attractive, mottled, very light green color, so light as to nearly warrant the name white or gray. The flesh is deep red in color and of very fine quality—fully equal to the old "Icing," which has long been recognized as one of the finest flavored Watermelons grown. In size, specimens weighing 60 to 70 pounds have been raised.

SEMINOLE—In shape, this is oblong, slightly tapering at the ends. One of the claims of the grower, which we have proved by testing, is that it is solid, ripening clear up to the rind. It is one of the largest in cultivation and is very prolific. The prevailing color of the fruit is grayish-green, though on the same vine many will be found of a darker shade. The flavor is excellent; in a word, it is one of the best in cultivation, in every respect. We highly recommend this variety to melon growers. The stock we offer we have secured direct from the originator.

FORDHOOK EARLY—Has proved to be the largest EARLY variety on the list and we verily believe it to be the earliest of all. From seeds planted May 10th ripe melons were produced the last of July. The rind is tough, making it valuable for shipping. Color a uniform medium green; seeds white; flesh bright red and verysweet.

THE JONES—This is a splendid melon. The color of the skin is solid green, and the flesh is very bright red, particularly sweet, juicy and melting. It grows to a large size, frequently attaining the weight of eighty pounds. In shape it resembles Kolb's Gem, and like that variety is one of the best shipping sorts.

RUBY GOLD—Claimed by the introducer to be sweet and juicy, its leading quality, however, being the peculiar marking of its flesh, which is yellow veined with red, and sometimes red veined with yellow, so that when the melon is sliced it shows a distinct ruby star on a yellow ground, or vice versa.

ORANGE—The rind separates from the flesh when fully ripe; flesh red, tender and sweet.

COLORADO PRESERVING CITRON—Used only for preserving; flesh white and solid; fruit large, round and smooth, dark and light green striped, exceedingly productive, color of seed green. Great improvement over the old fashioned citron.

RED SEED CITRON—Old standard variety, especially used for preserving; flesh white and solid, seeds green.

NEBRASKA STOCK MELON--(See Field Seeds.)

MUSHROOM SPAWN.

French, Mousseron. German, Champignor

Mushrooms can be grown in the cellar, in sheds or in hot-beds, in open air, on shelves or out-of-the-way pla-ces. Fermented borse manure ces. Fermented horse manure at a temperature of about 50 to 60 degrees, is made into beds the size required, one foot deep; in this bed plant the broken pieces of spawnsix inches apart covers apart coveres apart covering the whole with two inches of light soil and protect from cold and severe rains. The Mushrooms will appear in about 6 weeks,

Mushrooms

Mushrooms. Water sparingly with luke-warm water.

MUSTARD.

French, Moutard. German, Senf.

For salad and greens sow broadcast early in spring, and for salad cut before the third leaf is formed, and when of large growth use for greens.

YELLOW, OR WHITE LONDON-Best for salad.

BROWN, OR BLACK-More pungent than the white.

CHINESE CURLED, OR GIANT—Leaves twice the size of the White, stems more succulent, of deeper green, flavor pleasantly sweet and pungent.

GOLDEN—A new and very superior sort, having broad leaves of a rich, lemon color, which they retain after cooking. In flavor it is superior to the old sort, and is also fully equal to them in hardiness.

NASTURTIUM OR INDIAN CRESS.

French Capucine. German, Kapuziner Kresse.

Sow early in the spring, in drills one inch deep, and train the plants on brush, strings or trellis work. The flowers and young leaves are used as salad, and the green seeds for pickling, which are esteemed an excellent substitute for capers The flowers are very ornamental.

TALL YELLOW

OKRA, OR GUMBO.

French, Gumbo. German, Ocher.

Sow about the middle of spring, in drills, and thin the plants to a foot or more apart. Highly esteemed and cultivated for its green seed pods, which are used in soups or stewed and served like Asparagus. Should be gathered while young and tender, and for winter use slice into rings and dry on strings or otherwise.

LONG GREEN. OR LONG WHITE—Long ribbed pods.

IMPROVED DWARF GREEN-Early and very productive; smooth pods.

ONION. 1896-New Seed-1896. French, Ognon. German, Zwiebeln.

French, Ognon. German, Zwiebeln.

No one can appreciate the value of RELIABLE SEEDS better than those who have been once disappointed, and too much care cannot be exercised in selecting your supply. There is no vegetable where the quality of the seed exerts a greater influence upon the crop than in Onions. Our stock is all grown from choice bulbs, selected carefully by hand, and is unsurpassed in this country.

There is no crop, perhaps, more sure than that of Onions. Rich soil, with a good application of manure every year, and proper attention, will almost invariably insure a good crop. Five hundred bushels per acre is a medium crop, while from eight to twelve hundred bushels are not unusual under the best cultivation. Onions, unlike most of time. Soil that will produce a full crop of corn, will yield a good crop of Onions. Shallow plowing is the general rule; drag even and level, finishing with a hand rake. Mark out rows, perfectly straight with marker fourteen inches apart. Sow the seed as early as the season will permit, using a hand seeding machine at the rate of five pounds per acre. As soon as the Onions are visible, go over with a wheel, if you have one. If not, a thin, narrow bladed hand hoe should be used, and repeat this work as often as the weeds appear. Sharp attention must be given to weeding, or "before you know it." the weeds will have gotten the best of you, and your crop will result in a partial, if not a total failure.

In the process of cultivation be careful not to stir the soil too deeply, nor to collect it about the growing bulbs. When the tops become entirely decayed, which will occur in August or September early, rake the bulbs from the drills and leave exposed to the sun for a few days, after which they will be ready for storing or for market.

TESTED—Our seed is all of 1896 crop, is unusually plump and heavy, and we have as is our invariable custom with all our seeds given the seed the most thorough sprouting tests, and find the germinating per centage to average exceedingly high this

If ordering by mail add to the catalogue price 10c per pound for postage.

American Varieties.

EXTRA EARLY
FLAT RED—A medium
sized flat variety, producing abundantly and coming into use about two
weeks earlier than Red
Wethersfield.

EARLY RED GLOBE—A new variety, maturing as early as the Extra Early Flat Red, but of abeautifulglobe shape; skin deep red; fiesh mild and tender; an excellent keeper and very desirable for market use.

Extra Early Red Flat Onions.

Large Red Wethersfield Onion. best variety of any on poor or dry soils.

LARGE RED
WETHERSFIELD—
This is the standard variety, and the favorite Onion in the West, where immense crops are grown for shipment. Large sized; skin deep purplish red; form round, somewhat flattened; flesh purplish white; moderately fine grained, and stronger flavored than any of the other kinds. Very productive, the best keeper, and one of the most popular for general cultivation. It is more inclined to form large necks if planted on suitable soil than the Danvers, but it is the

DANVERS YELLOW—This fine variety is a thick, flat, heavy, straw-colored Onion, mild flavored and yields abundantly, ripens early, and keeps equal to the best.

YELLOW DUTCH, OR STRASSBURG-Flat-shaped, excellent flavor. The best variety for yellow sets.

DANVERS YELLOW GLOBE Distinct in form, being nearly globular; of a beautiful silver-yellow color; mild flavor and good keeper.

SOUTHPORT YELLOW GLOBE Averyhandsome Onion: oblong

lent for pickling, and the best variety to grow white sets.

SOUTHPORT LARGE WHITE GLOBE.

True globe-shaped; enormous yielder; grows to a large size; of mild flavor, and a good keeper.

THEN.S.CO'S PICK-LING-For early bunching, pickling or sets, the finest strain offered. This may seem a broad statement, but for these purposes we have never sold or seen its equal. Private planters, market gardeners, pickle factories and others who once use it will have no other.

SOUTHPORT LARGE RED GLOBE.

This variety is very similar to the Southport Yellow Globe in shape and size, but ripens somewhat later, maturing a few days later than the Red Wethersfield. It is a splendid keeper, and in quality is superior to most other red varieties.

WHITE GLOBE-

A large, firm, globeshaped variety, with white skin; fine flesh; handsome in shape and a good keeper.

Southport Large Red Globe Onion.

Imported Varieties.

The following varieties have been tested in this country, and have given perfect satisfaction. While we would not recommend the risking of a large crop of Onions by sowing imported seed, we believe the following varieties will be found very desirable for early market and home garden use. The flavor of the Italian varieties is mild, and they are in every way well adapted to culinary purposes.

Mammoth Silver King Onion.

PRIZE-TAKER-(See Novelties).

MAMMOTH SILVER KING—The largest Onion in cultivation. Has been grown extensively the past few years in all sections of the country, especially in the west, and has given universal satisfaction. If you want to grow large Onions give the Silver King a trial.

RED BURMUDA—This is the well known large Onion of commerce; when well cultivated, bulbs grown in this country are equal in size to imported ones.

PARIS WHITE PICKLING, OR SMALL SILVER SKIN— For pickling. This is of small size; silvery white, and used almost en-tirely for pickling on account of its small size, handsome appearance and mild flavor.

EXTRA EARLY BARLETTA—They are of a PURE PAPER WHITE color, VERY MILD AND DELICATE IN FLAVOR, from one inch to one and a half inches in diameter, and three-fourths of an inch in thickness. Both for table use and for pickling it is most valuable, while its extreme rapidity of growth will astonish every one who raises it the first time.

RED GIANT ROCCO-A splendid large Onion, of globular shape: light brown skin, and of delicate flavor.

WHITE QUEEN-A very early variety; white, small and fine

GIANT WHITE TRIPOLI-Grows to an enormous size, especially in the south. White skin, flat and of mild flavor.

ONION SETS.

Prices are based on the present market rates and are subject to change, according to the market without notice. The market fluctuates very much (sometimes up and often down) especially in early spring, hence we do not care to make a fixed price. Lowest market prices, on small or large quantities will be given on application at any time. At bushel, peck and half peck prices the buyer pays the express or freight; at pint and quart prices we pay the postage.

Sets should be planted out as early in the spring as the ground will permit. Plant them in rows one foot apart, with sets three or four inches apart.

WHITE BOTTOM

WHITE BOTTOM SETS RED BOTTOM SETS

YELLOW BOTTOM SETS

RED TOP SETS

WHITE MULTIPLIER—An Onion of pure white silvery color, as shown in the cut. It is very hardy and will prove a grand acquisition to this class of Onions. White Onion seed is usually high priced, hence the advantage of a white "Multiplying" Onion of this kind. Very useful for pickling. The NEW WHITE MULTIPLIER ONION is enormously productive, and its handsome appearance will make it one of the most saleable and profitable varieties that can be grown.

POTATO ONIONS—Should be planted in March and April. Select the large bulbs, place them ten inches apart, with the crown of the bulbs just below the surface of the ground.

EVERGREEN TOP, OR WINTER ONIONS-These Onion sets look like Top Onions. They are planted in September, and are used for early spring Onions, for eating green. Ready for shipment in September. Prices upon application.

GARLIC—Plant in April or May, one inch deep, in drills 14 inches apart, and from 5 to 6 inches apart in the rows. Keep the soil loose and free from weeds, and when fully grown, which will be about the end of July, the bulbs may be harvested like the Onion.

PARSLEY.

French, Persil. German, Petersilie.

Parsley thrives best in a rich soil. The seeds germinate very clowly, three to four weeks generally elapsing before it makes its appearance. Sow early in spring half an inch deep, previously soaking the seeds for a few hours in tepid water.

EMERALD—This new variety has a beautiful dark green crimpled leaf, what some would call triple curled: it is one of the most desirable varieties for garnishing purposes.

PLAIN-This is the hardiest variety, and is preferred by some on this account and because the leaves are lighter and more graceful.

Champion Moss Curled Parsley.

CHAMPION MOSS CURLED—A compact growing, finely curled variety, of a bright, slightly yellowish-green color. Very handsome and attractive

FERN LEAVED—A new variety of most beautiful form and coloring, and is well adapted for garnishing dishes on the table, and also makes a very ornamental plant in the flower garden.

DOUBLE CURLED-A dwarf; beautifully curled sort; excellent for garnishing.

HAMBURG, OR TURNII roots are used for flavoring soups. OR TURNIP ROOTED-Fleshy-rooted; the

PARSNIP.

French, Panais. German, Pastinake.

Sow as early in the spring as the weather will admit, in drills fifteen inches apart and half an inch deep, in rich, well manured ground, well dug. Cultivate similar to carrots, and thin out to six inches apart in the rows. The roots improve by leaving in the ground over winter, securing enough in pits of the cellar for immediate use.

If ordered by mail, add to the catalogue price, 10c per lb, for postage.

GUERNSEY, OR HALF-LONG—As name indicates, not as long as the Hollow Crown, but for our western soils more desir-able, being much easier to dig; quality very sweet and delicate.

HOLLOW CROWN, OR LARGE SUGAR-The largest variety in cultivation; roots long, white, smooth, tender, sugary and excellent flavor.

MAGNUM BONUM—A new variety of the Hollow Crown type; it grows to a good length in soft, mellow soil, and very smooth; it is uniform in shape, has but very few fiberous roots as is customary with most sorts.

Half-Long Guernous roots as large amount of saccharine matter and is a parsnip that can be relied upon as turning out even in growth, producing heavier and less shorter tops than any other parsnip known of.

PEAS.

French, Pois. German, Erbsen.

Trench, Foss. German, Erbsen.

The planting of an early crop of Garden Peas should be made in the spring, as soon as the ground can be worked, in a warm, dry situation, and covered about three inches. The ground must be manured the year previous, or the peas will be apt to grow too much to straw. The height to which all peas grow depends in great measure upon the richness of the soil and the wetness of the season. They are usually planted in double rows from three to four feet apart, and, those requiring it, bushed when about six inches high. The large and later sorts do better at a greater distance apart, leaving a broad space for planting low growing vegetables between. They should be kept clean, and earthed up twice in their growth. As soon as the peas are gathered the straw must be pulled and removed.

If ordered by mail, add to the catalogue price 8c per pt, and 15c per qt, for postage.

Dwarf Extra Early Peas.

TOM THUMB-Remarkably dwarf and early, of excellent quality and yields abundantly; one foot high.

American Wonder Pea.

AMERICAN WONDER—One of the earliest wrinkled peas in cultivation, of the finest quality and flavor, and wonderfully productive; its great distinctive feature, however, is its compact and dwarf growth, seldom exceeding ten inches in height.

McLEAN'S LITTLE GEM—A dwarf, prolific, green, wrinkled marrow; habit similar to the Tom Thumb; it has all the sugary flavor of the late wrinkled peas, besides being very early; height, one foot.

CARTER'S PREMIUM GEM-A valuable extra early, dwarf, wrinkled pea, robust in growth, with long pods; height, one foot.

McLEAN'S BLUE PETER—A larger, better and earlier form of Tom Thumb, having blue seed. Very dwarf and early; a good bearer and of excellent quality.

Extra Early Peas of Medium Height.

NEBRASKA LIGHTNING-(See Novelties.)

THE NEB. SEED CO.'S FIRST AND BEST—Complaint is BEST—Complaint is sometimes made that different seedsmen offer the same Fea under different names, but careful comparison convinces us that the stock we offer as FIRST AND BEST is, indeed, the first and the best as to earliness and uniformity of ripening best as to earliness and uniformity of ripening and for market gardener's use, maturing all the pods in about forty-five days, so that frequently the ground can be ready for a second crop in seven weeks from planting. Vines small, about eighteen inches high, bearing three to seven straight, handsome pods, each containing six to eight medium sized round Peas of good quality. good quality.

KENTISH INVICTA-A prolific early variety of fine flavor; 21/2 feet.

MAUD S—One of the best first early Peas for market or private use; vines about 2 feet high, long, large, well filled pods, which ripen up evenly; Peas good size and of excellent flavor.

PHILADELPHIA EXTRA EARLY-Vine, 2½ feet; Peas smooth and excellent quality. A deservedly popular market sort.

ALASKA—This new market Pea has become a standard variety, proving to be not only several days earlier than most early sorts, but of larger size and ten per cent more productive. The vines are very dwarf, growing about 20 inches high. Smooth, green Peas.

RURAL NEW YORKER—Early, productive and uniform in ripening. It grows about 20 inches high and is quite similar to Philadelphia Extra Early.

Second Early Peas

THE NEB. SEED CO.'S FAVORITE-(See Novelties.)

McLEAN'S ADVANCER—A green, wrinkled variety, about 2½ feet high with long pods, which are abundantly produced and well filled to the end. About the best second early on the list; excellent flavor. A favorite with canners; a good one for market gardeners, as it comes in close after First in Market.

DWARF CHAMPION—Undoubtedly one of the best Second Early Peas grown; long, round pods, closely filled with large lucious, wrinkled Peas, of extra fine quality and very productive, well worthy for general cultivation.

HORSFORD'S MARKET GARDEN—The best Second Early Pea, a cross between the "Alpha" and "American Wonder." It grows from 20 to 30 inches high, is very stocky, and requires no bushing. It is extremely prolific and bears its pods always in pairs.

BLISS' EVERBEARING—The vines grow about 18 inches high and are very prolific, as many as one hundred pods have been counted on a single vine. The Peas are of superior flavor and very tender.

BLISS' ABUNDANCE—Remarkably productive and of excellent quality. One and one-half feet high.

Late or Main Crop Peas.

CARTER'S STRATEGEM—Green, square, wrinkled; height, two feet; vigorous, branching habit; remarkably luxuriant foilage; leaves unusually large sized. Under favorable conditions an enormous cropper. Pods long, well-filled, with from seven to nine peas of enormous size.

CHAMPION OF ENGLAND—Universally admitted one of the best peas grown; delicious flavor, profuse bearer; four feet.

LARGE BLUE IMPERIAL—A good bearer and fine flavored; a good summer Pea; strong grower; very large in size, two feet high.

TELEPHONE—Vines very strong, averaging eighteen to twenty pods to the plant. It branches considerably, the branches bearing from three to five pods. The pods average six to seven large wrinkled seeds of the first quality.

PRIDE OF THE MARKET—Vines of medium height, stiff with large, dark-green leaves, and bearing at the top, generally in pairs, a fair crop of very large, dark-green pods well filled with large peas of good flavor. This has become popular on account of its handsome pods, and is one of the few English peas which do well in this country.

MARROWFAT—LARGE WHITE—One of the oldest varieties in cultivation, and a favorite market sort; it grows about four feet high with very large, broad pods, well filled, of excellent quality, but

LARGE BLACK EYED MARROWFAT—An excellent variety, growing about five feet high; pods large; a prolific bearer, and can be recommended as one of the very best Marrowfat sort.

Edible Pod Varieties.

DWARF GRAY SUGAR, EDIBLE PODS—The most desirable of all edible pod Peas; very early and prolific; pods broad, flat and crooked, and contain five or six Peas; one foot high.

TALL, GRAY SUGAR, EDIBLE PODS—Similar to the preceding, but five feet high.

PEPPER.

French, Piment. German, Pfeffer.

Sow early in hot-bed, or in open ground about the middle of spring. Transplant when three inches high, to one foot apart, in drills twenty inches apart, and earth up a little in hoeing, which can be continued until the plants are in full blossom.

LARGE BELL, OR BULL NOSE—A very large sort, of square form, tapering to a point; mild, thick and hard; suitable for filling with cabbages, etc., and for a mixed pickle. Less pungent than most other sorts, and one of the earliest varieties,

SWEET MOUNTAIN—Similar to the Bell, but larger; much used for stuffed pickles.

LONG RED CAYENNE-Long, red, hot and pungent; dwarf

SQUASH, OR TOMATO SHAPED—Fruit more or less ribbed; color red; flesh thick, mild and pleasant to the taste.

GOLDEN DAWN—An excellent variety of great merit; color bright golden yellow; very brilliant and handsome; entirely exempt from fierce flavor.

Ruby King Pepper.

RUBY KING—The peppers of the Ruby King attain a very large size. Ordinarily they grow four and one-half to six inches long, by three and one-half to four inches thick. When ripe they are of a beautiful, bright ruby-red color, and are always remarkably mild and pleasant to the taste—in this respect unequaled by any other variety. One of the best.

CHERRY RED-Red. round, very hot and a great bearer.

CHILI-In growth like the Cayenne, but smaller and later; used for pepper sauce.

PUMPKIN.

French, Potirou. German, Kuerbis.

These are easily, Tourion. German, Marries.

These are easily grown and profitable for stock-feeding. At time of corn planting scatter a few seeds in every fourth or fifth hill, or for a large crop sow in May, in good warm soil in hills eight or ten feet each way, four plants to a hill. Avoid planting near other vines as they will hybridize.

CALHOUN—(See Novelties).

Mammoth King Pumpkin.

MAMMOTH KING—The largest variety ever introduced. An enormous yielder, having produced over 100 tons per acre. The flesh is very thick, bright orange color and of fine quality, and in flavor equals squash. It has no superior for pies, and is of excellent quality either boiled or baked.

Large Cheese Pumpkin.

LARGE CHEESE—Cheese shaped, in flavor like the Crookneck squash; yellow-fleshed, fine-grained, and very productive; superior to most field varieties.

SUGAR—This variety is smaller than the Large Field, but of finer grain, sweeter and very prolific. First-rate, either for the table or for feeding stock.

BURPEE'S QUAKER PIE—This very distinct and valuable variety hails from Washington County, N. Y. It is of peculiar shape, being unlike any other; it is oval and tapers toward each end. It is of a creamy color both inside and out. By being stored in a warm, dry place, the pumpkins can be preserved until late in the winter.

JAPANESE PIE PUMPKIN. This remarkable variety comes from Japan, and makes a valuable addition to our ing pumpkins. The flesh is The flesh is very thick, nearly solid, the seed cavity being very small in one ity being very small in one end of the pumpkin, usually finegrained, dry and sweet, having much the same taste and ampear-

Japanese Pie Pumpkin.

ance as sweet potatoes. The seeds are peculiarly marked and sculptured in Japanese characters.

CUSHAW, CROOKED NECK-Solid flesh, fine and sweet; keeps well.

Tennessee Sweet Potato Pumpkin.

TENNESSEE SWEET

POTATO. Grows to a medium size, pearshaped, a little ribbed, color creamy white, sometimes lightly striped with green; flesh thick, creamy white, remarkably fine grained, dry and brittle, and of most excellent flavor.

CONNECTICUT FIELD.

A large yellow variety, hard shell; an excellent variety for field culture.

RADISH.

French, Radis. German, Radieschen.

Radishes thrive best in a light, sandy loam; heavy or clayey soils not only delay their maturity, but produce crops much inferior both in appearance and flavor. For a successive supply sow from the middle of March until September, at intervals of two or three weeks. For an early supply they may be sown in a hotbed in February, care being taken to give plenty of ventilation, otherwise they will run to

If ordered by mail, add to the catalogue price 10c per lb, for postage.

NEW LONG BRIGHTEST SCARLET—(See Novelties.) NEW ROSE GEM—(See Novelties.)

EARLY SCAR-LET TURNIP, WHITE TIPPED

-Very early; color bright scarlet, tipp-ed with white; an excellent market va-riety; fine for forc-

EARLIEST CARMINE FORC-ING — The earliest and best variety for forcing in green-houses or hot-beds; sure to bottom, with few leaves or tops.

EARLY SCARLET GLOBE—This
splendid radish is
one of the quickest
growing and handsomest extra early
Radishes in cultivation. It is crisp and
tender, while its perfect globe shape
leaves nothing to be
desired. Market
gardeners and amateurs will surely
grow this Radish
largely.
NON PLUS II

Early Scarlet Turnip, White Tipped Radish.

argely.

NON PLUS ULTRA—This is one of the smallest topped and one of the earliest forcing Radishes in cultivation. Roots small, round, deep rich red, with very crisp, tender, white flesh. This is one of the best varieties for forcing, as it will mature in eighteen to twenty-one days, and the tops are so small that a large number can be grown in a single bed.

DUIT A DELPHIA WHITE BOX—This variety is entrely

PHILADELPHIA WHITE BOX-This variety is entirely distinct from any early white turnip Radish heretofore offered. Its short top and rapid growth especially fits it for growing under glass, in frames, or "boxes," hence its name, as well as early sowing on squares or borders in the open ground. Owing to its very few short leaves, it can be sown very thickly in the row without causing the leaves to "draw."

EARLY WHITE TURNIP-In form like the Early Scarlet Turnip; color white; excellent flavor.

Early Deep-Scarlet Turnip Radish.

PEARL FORGING

This sort is a cross between Wood's
Early Frame and White Strassburg.
A most distinguishing characteristic
is its rich, waxy appearance. They
remain in eatable condition at least
two weeks longer than Wood's Early
Frame; are not pithy, and do not become woody. come woody.

EARLY SCARLET OLIVE-SHAPED-Very early; of a lively rose color.

EARLY WHITE OLIVE-SHAPED—Same as above except in

FRENCH BREAKFAST-A quick growing variety for early forcing; oblong shape; color scarlet, tipped with white; very crisp and

EARLY DEEP SCARLET TURNIP—A small round red, tur-nip-shaped Radish, with a small top and of very quick growth; mild and crisp when young.

CHARTIER, OR LONG ROSE, WHITE TIPPED—Ex-ceedingly handsome and attract-ive, being of a deep crimson color at the top, and blending off to al-most white at the bottom. It is nost white at the bottom. It is very tender, and remains so for a long time after attaining its growth, which is quite an im-portant feature to the market gardener. A good summer va-

EARLY LONG WHITE VIENNA, OR LADY FINGER—This is unquestionably the finest long white radish in cultivation. Shape most attractive and handsome, while in color it is beautiful snow white. It is of very rapid growth, and its fine white flesh is remarkably crisp, brittle and tender, equally desirable for the market or home garden.

WOOD'S EARLY FRAME
—In shape between Olive and
Long; excellent for forcing; very
early. A favorite with market
gardeners. Color scarlet, fine

and for market.

Chartier Radish. EARLY SHORT-TOP Chartier Radish.

LONG SCARLET—The standard sort grown for private gardens

LONG WHITE RUSSIAN—A fine winter sort, very large, skin white; smooth and tender; flesh delicate, of fine flavor, and a most excellent keeper.

LONG WHITE SPANISH-Very large size and firm texture.

GOLDEN GLOBE—New French variety; very early, grows to good size, stands the heat well; very popular with market gardeners; a beautiful golden-yellow; flesh crisp and tender.

GIANT WHITE STUTTGART—A quick growing and therefore very early sort. It is of the largest size, and both flesh and skin are pure white. It is of fine quality, firm and brittle, never getting pithy, so that it can be used at any stage of growth. Pkt, 5c; oz, 10c; ½ 1b, 25c; lb, 75c.

GRAY SUMMER TURNIP-An excellent variety for summer

YELLOW SUMMER TURNIP—Grows to a large size; excellent to stand the heat and drouth of the summer.

WHITE STRASSBURG—Suitable alike for market and private gardens. It is of the tapering shape, both skin and flesh white. It is an excellent summer variety, being tender, crisp and of fine flavor, and a quick grower.

MARKET GARDENER'S EARLY HALF LONG DEEP SCARLET—In shape they are intermediate between the Early Scarlet and Scarlet Olive. They are of rapid growth, with a rich scarlet skin, white flesh, very tender and crisp.

CALIFORNIA MAMMOTH WHITE-Eight to twelve inches long, and abouttwo and a half inches thick; flesh white, solid and tender. A very good fall variety.

LONG WHITE NAPLES—Flesh white, crisp and mild.

CHINESE ROSE, WINTER—Very popular with market gardeners. Form conical, very smooth, brightnose colored; large size, firm and tender; flesh of fine flavor. A very good fall variety.

LONG BLACK SPANISH— One of the hardiest and best for winter use.

ROUND BLACK SPANISH
—Sow about the last of summer—for
fall and winter use.

MIXED RADISH SEED-In California White Mammoth a good selection of radishes, for a Radish small amount of money, we have mixed ten of the Leading Kinds together.

RHUBARB.

French, Rhubarbe. German, Rhabarber.

Sow in April, in drills one foot apart, thinning out to about the same distance apart in the rows when a few inches high. Transplant into deep, rich soil in fall or the following spring, about three feet apart each way. If propagated by dividing the roots, it may be done either in fall or spring.

LINNÆUS-Early, large and tender.

VICTORIA-Very large, later than Linnæus.

MONARCH-The largest and most vigorous and productive variety known.

RHUBARB ROOTS-(Choice selected.) Either of above named varieties with three or four eyes,

SALSIFY, OR OYSTER PLANT.

French, Salsifis. German, Bocksbart.

Sow early in the spring, in drills fourteen inches apart, and thin to two inches apart. Cultivate same as Carrots or Parsnips. Gather what may be wanted for the winter, and let the balance stand in the ground for the next spring's use.

LONG WHITE-The standard va-

MAMMOTH SANDWICH IS-LAND—A new and large growing va-riety, of great value to the market gard-

SCORZONERA, OR BLACK OYSTER PLANT-Root black before

SEA-KALE.

Grown for its blanched shoots, which are cooked as spinach. By planting the roots closely in a warm cellar, a supply may be had all winter. Sow in drills two feet apart, thin out to six inches, and the following, spring plant in hills three feat apart.

SPINACH.

French, Epinard. German, Spinat.

This is one of the most important of our market garden crops, and one that requires very little care. For summer use sow at intervals of two to three weeks from April to August, and for early spring crop sow in September, covering it in exposed places, with straw to protect it from the severe frost. Spinach succeeds best in rich soil.

Mammoth Sandwich Island Salsify.

If ordered by mail add to the catalogue price 10c per pound, for postage.

BLOOMSDALE CURLED SAVOY-LEAVED-The leaves are wrinkled like Sa-voy Cabbage, from whence the name; it is a very valuable va-riety, particularly for market gardeners.

BROAD LEAVED FLANDERS—This is an excellent and productive variety, very hardy, robust grower, producing long thick leaves, ten inches long and eight inches wide at the base, and may be sown nearly all the year round. Like all extremely vigorous-growing and large sized varieties, this requires a plentiful supply of nutriment and is worthy of recommendation.

Long Standing Prickly Spinach

LONG STANDING PRICKLY SPINACH—This is the LARGEST THICKEST LEAVED AND BEST KEEPING SPINACH We have ever seen. It is very hardy, standing winter better than any other; is equally desirable for summer planting. It gives the largest weight of thick, tender leaves of any sort, and remains a long time in condition for use. We think it is the best Spinach.

ROUND-LEAF VIROFLAY-A variety with large, thick leaves

NEW ZEALAND—Grows very large and luxuriant; warm, rich soil, will stand the heat to a remarkable degree; plants should stand two or three feet apart, and may be cut all through the season.

PRICKLY OR FALL—Stands the winter well, but gives less bulk than the Round Leaf.

SQUASH.

French, Courge. German, Kuchen Kuerbis.

Plant in hills, in well prepared ground, mixing two or three shovels full of well rotted manure in each hill. Light soils are best suited for their growth. Plant six to eight seeds in each hill and thin out to three or four after they have made partial growth. Plant bush varieties from three to four feet apart each way, and the trailing sorts six to eight feet. to eight feet.

> If ordered by mail add to the catalogue price 10c per pound, for postage.

FORDHOOK-(See Novelties.) MAMMOTH WHITE BUSH SCALLOP-(See Novelties.) MAMMOTH SUMMER CROOKNECK-(See Novelties.)

Perfect Gem Squash. White Bush Scallop Squash. EARLY WHITE BUSH SCALLOP—Similar in form to the preceeding, but with a clear, white skin, and more tender and delicate flesh. By many considered the best of the summer varieties.

EARLY YELLOW BUSH SCALLOP—An early, flat, scallop-shaped variety; color yellow, flesh pale yellow and well flavored; very productive; used when young and tender.

PERFECT GEM—A remarkable variety, inasmuch as it is equally desirable either as a winter or a summer squash, and possessing the best features of both classes. It is a splendid keeper.

EARLY SUM-MER CROOK-NECK-Very pro-ductive, small, crooknecked; with watery excrescences; color yellow; shell very hard when ripe.

EXTRAEARLY PROLIFIC MAR-ROW — Similar to Boston Marrow, but much earlier and far more productive; of most delicious fla-vor for all end winmost delicious fla-vor; for fall and win-ter; one of the very best for market gardeners.

Early Summer Crookneck Squash. VEGETABLE MARROW—A favorite English sort. The fruit is very variable in size, from 9 to 18 inches in length, and from 4 to 6 inches in diameter; more delicate than our summer squashes.

WHITE PINEAPPLE—A very prolific variety, yielding from 5 to 8 sqashes to each vine. The flesh is of a creamy-white color, fine grain and splendid quality, having a rich co-coanut flavor.

COCOANUT—Very prolific, pearing 6 to 8 small, round squashes to a single vine; flesh yellow and quality good.

AMERICAN TURBAN, OR TURK'S CAP—An excellent fall and winter variety; flesh orange-colored, fine grained and of good flavor.

Pineapple Squash. ESSEX HYBRID—An early and rapid growing variety, with thick, rich-colored solid flesh; of the richest flavor; it is also one of

HUBBARD-The HUBBARD-The leading squash for fall and winter use; good in any climate; hard-skinned; a splendid keeper; flesh, dark yellow, fine grained, very dry, sweet and rich.

MARBLEHEAD MARBLEHEAD
—A very fine late variety, resembling the
Hubbard, only that
the flesh is a little
lighter than that variety. It is a fine
yielder and a splendid
technic keeper.

Hubbard Squash.

BOSTON MARROW—A valuable variety, coming in about ten
days later than the bush sorts; a good keeper and of fine flavor.

SIBLEY-This squash is of decidedly of decidedly distinct shape. Its size is medium—just right for marketing. This quality combined with fine grain, exquisite flavor and wonderful productive ness wonderful productive ness will make it a favorite with everygardener. The fiesh is solid, bright orange and thick. The shell is pale green, hard and flinty, making it a good shipper. good shipper.

BUTMAN-A variety in size and productiveness resembling the Hubbard; flesh, fine grained, lemon-colored, and of excellent flavor.

CANADA WIN-TER CROOKNECK— Resembling the Cushaw pumpkin; good keeper; fine for pies.

MEXICAN BAN-ANA-Originated by crossing imported va-rieties. It is sweet, rich, finest grained meat, exquisite flavor, good keeper, and the heaviest for the size of any ever grown. The size is from 2 to 3 feet long and weighs from 30 long and weighs from 30 to 50 lbs.

SUNFLOWER.

German, Sonnenblume.

HELIANTHUS—Grown especially for its seed, which is good poultry feed. The stocks are used as fuel in many sections where wood and coal are scarce. The leaves are often used as forage. Plant and cultivate same as corn.

MAMMOTH RUSSIAN

TOBACCO SEED.

French, Tabac. German, Taback.

The seed should be sown as early as possi-ble after the danger of frost is over. When the plants are about 6 inches plants are about 6 inches high, transplant into rows 6 feet apart each way and cultivate thoroughly with plow and

hoe.

HAVANA—Commands a high price for cigar stock.

MISSOURI BROAD LEAF. A well known stand-

ard sort.

CONNECTICUT SEED LEAF. This variety is a staple crop.

GENERAL GRANT. Very early, small leaves with fine veins, mostly grown in the nor-thern states.

TOMATO.

French, Tomate. German, Liebesapfel.

Sow early in March, in hot-beds or seed boxes, and when plants have four leaves, transplant to four or five inches apart; give plenty of air and endeavor to secure a vigorous and healthy growth. When all danger of frost is past, transplant to open ground, four to six feet apart each way. Well manured, light, sandy soil is best, but it must be remembered that a surplus of manure stimulates the growth to the detriment of the fruit.

N. S. CO'S LONGKEEPER—(See Novelties.)

ATLANTIC PRIZE—We have no hesitation in offering this as the best and earliest of the extra early sorts; and invaluable to those to whom earliest is the first consideration.

MANSFIELD TREE—This variety has created the greatest sensation since its introduction two years ago. The past season it grew to a height of thirteen feet, and produced Tomatoes of enormous size and the most delicious flavor.

EARLY RUBY—The great value of this variety lies in the fact that it is by far the earliest of all the large-sized Tomatoes which combine good form, rich crimson color and solidity, and it is certain to prove the leading market variety.

The Ignotum Tomato.

THE IGNOTUM (Unknown)—This new Tomato was first discovered at the Michigan Agricultural College in 1887, by Prof. L. H. Bailey, being a sprout from a foreign variety under test at that station. It is of handsome deep red color, ripening to the stem and free from crack or rot. It will unquestionably become one of our finest market

THE NEW STONE—Ripens tor main crop; is very large and of bright scarlet color; very smooth, with occassionally a specimen very slightly octagon shaped; ripening evenly to the stem without a crack; exceedingly solid and firm fleshed.

LIVINGST-ON'S BEAU-TY-It is extra early, growing in clusters of four or five, glossy-crimglossy-crim-son, partaking of some of the characteristics of the Acme; solid, rich fla-vor, very pro-lific, and good keeper. Re-tains its color and size until late in the sea-son.

DWARF CHAMPION
—A very dis-tinct, new va-riety, of tree-like, upright growth. The

growth. The plant grows stiff and upright, with very thick and short jointed stems. It can be planted as close as three feet. The Dwarf Champion will bear very heavy manuring; the strength increasing the abundance and size of fruit, instead of producing superabundant vines.

SELECTED EARLY PARAGON—Very solid, dark red color, heavy foliage, a favorite market variety; excellent for canning.

ACME—This is one of the earliest and handsomest varieties yet introduced. The fruit is of medium size, perfectly smooth and regular in shape, very solid and a great bearer; color, dark-red with purplish

OPTIMUS-OPTIMUS— An early, smooth variety of bright red color; ripens evenly and is very uniform in shape and size; flesh solid and of good flavor.

LIVINGS-TON'S PER-FECTION —
Larger in size than the Acme; color blood-red; it is one of the first to ripen; almost round in shape, perfectly smooth and very solid; of the best quality; enormously productive

Optimus Tomato.

5c; oz, 20c; ¼ lb, 60c; lb, \$2.00.

ESSEX HYBRID—Early, similar to the Acme in snape and color, somewhat larger; very desirable.

TROPHY, EXTRA SELECTED—When well grown is one of the best tomatoes in cultivation. It is unsurpassed in size, flavor, and productiveness, and in every other desirable quality.

THE MIKADO OR TURNER'S HYBRID—A new variety of very large size and superior quality. Color, purplish red; perfectly solid produced in immense clusters. It is one of the most desirable

market varieties.

EXTRA EARLY ADVANCE—Is one of the earliest. With favorable weather this Tomato will ripen in ninety days after sowing the seed. It is an excellent shipper, being exempt from rot, or cracking, ripens all over at once and is wonderfully smooth.

BALTIMORE QUEEN — A variety that has been especially recommended to us for canning, and which is grown around Baltimore for this purpose; fruit somewhat resembles the Trophy in appearance.

VOLUNTEER-One of the earliest, if not the very earliest, besides being a con tinuous bearer. It is the perfection of form, of the very finest quality, bearing but quality, b

THE CARDINAL

THE CARDINAL
—Color brilliant cardinal-red when ripe, appearing as if varnished flesh of almost as bright a color. In shape almost round, solid and with very few seeds.

GOLDEN TROPHY—Identical in form and size with the Red Trophy; color a beautiful canary-yellow, slightly tinged with red; desirable for table use and preserving.

PEACH—This is a distinct and very attractive appearing tomato, highly desirable for preserving, eating from the hand or table decoration. Fruit resembles a peach in shape, size and color, and is covered with a delicate furze, which makes the deception quite complete; flesh tender and of good flavor, Should find a place in every garden.

RED CHERRY-Fruit about an inch in diameter, in bunches; used in pickles.

Cherry Tomato.

YELLOW CHERRY—Similar to Red Cherry in form and habit, differing only in color.

PEAR-SHAPED YELLOW - Fruit pear-shaped and yellow; used for pickling.

YELLOW PLUM-Bright yellow in color; round and regular in shape, useful for preserves.

STRAWBERRY OR WINTER CHERRY—The fruit has a pleasant strawberry-like flavor, esteemed by many for pre-

serving.

TURNIP.

French, Navet. German, Weisse Rueben.

Light, well manured soil is best suited for Turnips. Sow the earlist varieties in April, in drills about fifteen inches apart, and thin out from six to nine inches in the rows. For a succession sow at intervals until the end of August. Turnips may be preserved until spring by cutting off the tops about one inch from the bulb and storing in a cool, dry shed or cellar, and covering with dry sand.

EARLY PURPLE TOP MUNICH—A German variety, very handsome; very early, with a bright, purplish-red top and a fine mouse-tailed root; very distinct and valuable,

EXTRA EARLY, PURPLE TOP MILAN—Fully a week earlier than the Munich, which has, heretofore, been considered the very earliest. It is of medium size and flat shape; pure white flesh, of excellent flavor; very small top and a good keeper.

 $\overline{\mbox{EARLY}}$ WHITE STRAP-LEAF—Differs from the Purple Top Munich only in color.

WHITE EGG—Flesh very firm and fine-grained; thin and perfectly smooth skin, and both flesh and skin are of snowy whiteness.

EARLY WHITE FLAT DUTCH-An excellent garden varesembling White Strap Leaf, the best variety for spring sowing.

POMERAN-IAN WHITE GLOBE-One of GLOBE—One of the most produc-tive; in rich soil the roots will fre-quently grow to 12 pounds in weight; globe shaped; skin white and smooth.

Early White Flat Dutch.

PURPLE, OR RED TOP STRAP LEAF, FLAT-Very early, quick grower; fine flevor and one of the most popular varieties grown, as whe I sown late it is one of our best wit ler varieties, being an excellent go of keeper,

PURPLE TOP WHITE GLOBE-A handsome looking bulb, and is rapidly taking the lead of all other varieties of early Turnip for market garden purposes.

YELLOW GLOBE—One of the best varieties for general crop; keeps well until late in the spring; grows to a large size, and excellent both for stock and table

Purple Top Strap Leaf Flat.

GOLDEN BALL (Robertson's)-A rapid grower; globe shaped, and of a beautiful bright yellow color and a good keeper

YELLOW ABERDEEN—Very hardy and productive, very firm; good keep-er; color pale-yellow, and closely resembles the Ruta Bagas; good either for stock or

Golden Ball.

LARGE WHITE NORFOLK—A large, globe shaped variety.

LARGE WHITE NORFOLK—A large, globe shaped variety. One of the best for stock.

SWEET GERMAN—Very popular in many sections; partakes largely of the nature of Ruta-Baga and should be sown a month earlier than the flat Turnips; flesh white, hard, firm and sweet, and it keeps well for winter and spring use.

LONG WHITE OR COW HORN—The roots good; snaped like a carrot, about half of which is formed above the ground; flesh white, fine grained and sweet; for table use.

RUTA BAGA-SWEDISH OR RUSSIAN TURNIP.

French, Chou Navet. German, Kohl Rueben.

In some parts of the country grown extensively as a farm crop. The roots may be preserved in a pit or cellar during the winter, and are excellent for table use. Sow from the 10th of June to the middle of July in drills two feet apart and thin out to eight inches.

IMPROVED AMERI-CAN PURPLE-TOP-A most excellent sort for either table or stock; yield heavily without tendency to long

SKIRVING'S PURPLE TOP-A good variety for table or stock; grows to a large size, flesh firm, solid, sweet and a good keeper.

LAINGS' IMPROVED
—An early variety; bulb handsome and of fine quality.

CARTER'S IMPERIAL HARDY S W E D E—Very hardy and productive; flesh yellow, solid, sweet and fine flavored; equally good for stock or table use.

SHAMROCK—A very fine purple top variety; bulb large and handsome, with small top and few leaves; a

Imp. Am. Purple Top Ruta-Baga.

SWEET, POT AND MEDICI-NAL HERBS.

No garden is complete without a few herbs for culinary or medicinal purposes; and care should be taken to harvest them properly. This should be done on a dry day, just before they come into full bloom, then dried quickly and packed closely, entirely excluded from the air. Sow in spring, in shallow drills one foot apart, and when well up thin out and transplant to a proper distance apart.

ANISE (PIMPINENLLA ANISUM.) Used for cordials, also for garnishing and seasoning.

BALM (MELISSA OFFICINALIS.) For balm tea or wine for fevers.

BASIL, SWEET (OCYMUM BASILIOUM.) For seasoning.

BENE (SESAMUM ORIENTALE.) BORAGE (BORAGO OFFICINALIS.) For flavoring. Excellent for

CARAWAY (CARUM CARYI.) Used in pastry, confectionery, etc.

CATNIP (NEPETA CATABIA.)

CORIANDER (CORIANDUM SATIVUM.)

DILL (ANETHUM GRAVEOLENS.) Used in making pickles.

FENNEL SWEET, (ANETHUM FŒNICULUM.) Ornamental leaves.

HOREHOUND (MARRUBIUM VULGARE.) For making cough

HYSSOP (Hyssopus Officinalis.)

LAVENDER (LAVANDULA VERA.) Aromatic medicinal herb.

MARJORAM, SWEET (ORIGANUM MAJORANA.) Desirable for

SEASONING.
OPIUM POPPY (PAPAVER SOMNIFEBUM.) ROSEMARY (ROSEMARINUS OFFICINALIS.)

RUE (RUTA GRAVEOLENS.) Medicinal herb. Good for croup in fowls.

SAFFRON (CARTHAMUS TINCTORIUS.)

SAGE (SALVIA OFFICINALIS.) Extensively used for seasoning.

SUMMER SAVORY (SATUREIA HORTENSIS.) Extensively used for seasoning.

TANSY (TANACETUM VULGARIS.)

THYME (THYMUS VULGARIS.) Extensively used for seasoning.

WORMWOOD (ARTEMSIA ABSYNTHIUM.) Used for medicinal purposes.

POTATOES.

Choice Northern Grown Seed.

TERMS:—Cash with order, Express or Freight charges always to be paid by purchaser. (PRICES SUBJECT TO MARKET FLUCTUATION.) Believing that the potato growers will obtain the best results from a change of seed, we have the past season, as heretofore, had our stock of Seed Potatoes grown for us especially in Northern Wisconsin.

The high cost of freight to Omaha forces us to advance our prices somewhat above that of the local market, but we feel that more than double the difference in cost is gained by planting Seed Potatoes grown at a distant point.

We cannot guarantee delivery in good order. Will ship in good condition but will not hold ourselves responsible against loss either by cold or heat. If large quantities are wanted, write for special prices.

ed by drouth, the vines appearing green and vigorous the entire

If ordered by mail, add to the catalogue price 10c per lb, for postage.

Early Varieties.

EARLY OHIO—Now widely known, and deservedly one of the most popular sorts "that grow in the ground." Extra early. Tubers nearly round, slightly oblong in form. Though not so large a cropper as some, it is several days earlier and more productive than the Early Rose, A very desirable market Potato.

Early Ohio Potato.

BURPEE'S EXTRA EARLY—One of the earliest varieties; it has proven to be ten days to two weeks earlier than Early Rose, Beauty of Hebron, Early Puritan, etc., fully one week earlier than the Early Ohio and nearly twice as productive. The potatoes are uniformly of good size, oblong in shape, very smooth, eyes set well on the surface, skin creamy-white, slightly shaded with pink; the flesh is pure white.

sood size, oblong in shape, very smooth, eyes set well on the surface, skin creamy-white, slightly shaded with pink; the flesh is pure white. THE NEBRASKA SEED CO'S EARLIEST—Has been thoroughly tested during the past five seasons, side by side with such standard earlies as Burpee's Extra Early, Early Ohio, Puritan, etc., and ripens its whole crop from one to two weeks earlier than any of them. The tubers are smooth, of excelent shape, and resemble the Early Rose in color before ripe, but turning to a creamy white. Skin is thick and tough, resisting scab and worms much better than other early varieties.

CROWN JEWEL—This potato is a seedling of the Early Ohio, Grown in competition with the Early Ohio, Early Rose and Sunrise, it more than doubled the yield of any of them; under precisely the same conditions, they were ready to dig ten days earlier. The vown Jewel is a strikingly beautiful Potato, skin white and smooth, eyes shallow but strong, flesh pure white and floury, cooking evenly throughout.

EARLY OHIO JUNIOR—A seedling of the Early Ohio. The tubers are oval, oblong, round at the seed end, with full eyes that are almost even with the surface. It is an excellent keeper, very productive, of fine quality, and has proven to be one week earlier than the Early Ohio.

JUNE EATING—Is the earliest market potato known. It was produced from the seed ball, one of them weighing one-half pound. Cooks as light and floury as a snowflake. They are very fine in form, smooth and regular in shape and grow uniform in size. The eyes are level with the surface, well defined and rather large, indicating that they will send out strong shoots. Color pink. Tubers grow large, very few small ones, usually compact and wholly below the surface,

EARLY SIX WEEKS—This variety is very evidently a seed ling of the Early Ohio which it closely resembles in every way, but

EARLY SIX WEEKS—This variety is very evidently a seed-ling of the Early Ohio which it closely resembles in every way, but is earlier, makes rather taller stalks, and appears to yield better on heavy soil than the Early Ohio. The potatoes grow so rapidly that under favorable circumstances they are as large as hen's eggs, and therefore fit for family use in six weeks from the time of planting, and mature in between ten and eleven weeks. We advise a trial,

advise a trial.

EARLY HARVEST—A beautiful oblong early potato of the greatest vigor and a heavy yielder. For an early potato this has no superior. Resembling somewhat the Polaris, but much more vigorous and productive, and of the very best quality.

BEAUTY OF HEBRON—One of the best early sorts; productive and excellent flavor; good keeper; pure white skin and flesh.

EARLY ROSE—A well known variety. Our stock is true from selected tubers.

EARLY SUNRISE—Very early and productive.

Main Crop Varieties.

Main Crop Varieties.

OLDS' WORLD'S FAIR—This is one of the best varieties. It wins favor wherever introduced. For description we can do no better than to quote Mr. Olds, the introducer: "Beautiful in appearance, very smooth, eyes few and right on the surface, so that there is the least waste in paring, symmetrical in form and outline, with a creamy white skin, all covered over with a netting; quality perfect."

GREEN MOUNTAIN—That it is an extraordinary valuable variety there is not a doubt. Its handsome form, white skin and large size re ommend it everywhere. The flesh is white and incrained, cooks dry and mealy and is of superior flavor. As a variety to keep for late spring use it has no superior. These qualities, combined as they are with fine appearance, makes the Green Mountain one of the most valuable varieties of late potatoes in cultivation. It roots so deeply that it seems to be but little effect-

ed by drouth, the vines appearing green and vigorous the entire season. This potato probably has the best yielding record of any variety ever introduced.

RURAL NEW YORKER No. 2.—This new variety has proven to be a large yielder. It is large and unusually smooth with few and shallow eyes; the skin is white as is the flesh, which is of superior quality. It is medium late and the best drouth resister on the list. Its only fault is that on some soils the tubers are hollow.

PARSON'S PROLIFIC—Known as one of the best main crop potato in cultivation. They are a very nice, smooth, white potato, slightly russeted and with eyes almost even with the surface. They run unusually even in size, there being few small ones and no over grown large potatoes. It is The POTATO for main crop.

no over grown large potatoes. It is The Potato for main crop. CARMAN No. 3—One of the productions of Elbert S. Carman, editor of the Rural New Yorker, and the result of careful hybridizing and selection. No potato ever introduced has given such an enormously large yield of fine, smooth, merchantable tubers. For general culture it has no equal. The tubers are rounded oblong, somewhat flattened, giving a form not likely to be hollow. The eyes, while large, full and strong, are flush with the surface, making it, as has been claimed, the smoothest large potato grown. The color is pure white. The growth of vine is very strong and vigorous and is as nearly blight proof as any potato can possibly be.

MAGGIE MURPHY—Twin sister to the "Belle of Ireland." The largest potato probably on our list and immensely productive. It is of Rose seedling type and a large producer. An excellent exhibition sort.

Seed Sweet Potatoes.

DESCRIPTIVE LIST

Grass, Clover, Tree and Field Seeds.

WE PAY particular attention to this department of our business. These Seeds are selected with special reference to their quality. Purchasers may rely upon our best exertions to furnish Grass, Clover, Tree and Field Seeds fresh, pure and free from noxious and foreign seeds; they are mostly Nebraska grown, and all recleaned by the best machinery to make it choice. On account of the early publication of this Catalogue we cannot bind ourselves to the price on Clover, Grass and Field Seeds-these are market articles, and prices are subject to variation, but purchasers may depend on having them at the prices ruling from store that date, and of the best quality, and that we will always send as much Seed as the money received will pay for. Market prices of the day, or special prices on large lots, cheerfully given on application.

EXP Express or Freight charges always to be paid by the purchaser, except if sufficient money is sent to pay postage—10 cents per pound. Two bushel bags 20 cents each extra.

GRASS SEEDS.

If ordered by mail add to the catalogue price 10c. per pound for postage.

EVERGREEN LAWN GRASS SEED—The essentials for a fine lawn are proper drainage, a careful preparation of the soil, thorough rolling and a selection of the seeds of such grasses as will produce a luxurant verdure from early spring until late in autumn. However much care is bestowed on the soil and seed, no lawn will be beautiful without frequent mowing, rolling and watering. Our Evergreen Lawn Grass Seed is a mixture of grasses which ripen in succession, thereby always presenting a green and beautiful appearance. The mixture we offer has always given perfect satisfaction, and the rapidly increasing demand proves conclusively that its merits are becoming widely known by those who realize that in order to produce permanent results, first quality seeds must be used. Sow in February to May, or in October to November. One quart will sow 300 square feet; four quarts will sow 1200 square feet; eight quarts will sow 2400 square feet; four bushels will sow one acre.

JOHNSON GRASS (SORGHAM HALAPENSE)—This is a species of the Sorghum family. It is an excellent grass for grazing, contains a large percentage of saccharine matter and is very valuable for dairymen and stock growers. Sow early in the spring or fall, about one bushel to the acre. Weight 25 lbs. per bushel.

MEADOW FOXTAIL GRASS (Alopecurus Pratensis)—A most valuable pasture grass, on account of its early and rapid growth and its being greatly relished by stock of all kinds. It thrives best on a rich, moist, strong soil, and grows about two feet high. Sow two bushels to the acre. Weight, 8 lbs. per bushel.

SWEET VERNAL GRASS (Antonanthum Oddratum)—This grass yields but a moderate percentage of herbage. It is remarkable for giving out a pleasant, sweet smell during the process of curing, Sow three bushels to the acre. Weight, 10 lbs. per bushel. JOHNSON GRASS (SORGHAM HALAPENSE) -- This is a species of

KENTUCKY BLUE GRASS (POA PRATENSIS)—This is the best pasturage for our climate and soil, succeeding finely on hill lands and producing the most nourishing food for cattle, retaining its quality to a late period in the winter, and farther south affording abundant food throughout the winter. In combination with white clover it forms an excellent lawn. Sow early in the spring or during the months of October and November. Weight 14 lbs. per bushel.

MEADOW FESCUE, OR ENGLISH BLUE GRASS—Grows two or three feet high, but never in large tufts like orchard grass, Gives more leaf than Timothy, less coarse stem, stands erect and blooms about the same time as Timothy. It is especially suitable for permanent pasture. Cattle thrive well on it, whether dry or in a green state. It is one of the hardiest grasses, and with a good stand secured it will endure more freezing than any other variety. Weight, 24 lbs. per bushel

ORCHARD GRASS OR ROUGH CROCKSFOOT (DACTYLIS GLOMERATA)—Well adapted for sowing under trees or in orchards and very valuable either for grazing or hay. Sow fifteen to twenty-five pounds to the acre. Weight 14 lbs. per bushel.

RED TOP (AGROSTIS VULGARIS)—A valuable grass. If sown on moist, rich soil, it will grow two feet, and on poor, sandy soil, about half that height. Sow fifteen to twenty pounds per acre. Weight, 14 lbs. per bushel,

CRESTED DOGTAIL (CYNOSECUS CRISTATUS)—An excellent grass for hard, dry soils; valuable for pastures and lawns. Sow one and one-half bushels to the acre. Weight 16 lbs. per bushel.

TIMOTHY (PHLEUM PRATENSE) — This is decidedly the best grass for hay, making a large return on strong, rich clay, of medium state of moisture. Sow twelve to fifteen pounds per acre. Weight, 45 lbs. per bushel.

ITALIAN RYE GRASS (LOLIUM ITALICUM)—This variety is similar to the English Rye Grass. It is very nutritious and valuable for pastures, especially for early sheep feeding; also excellent for lawns. Sow three bushels to the acre. Weight, 20 pounds per bushel.

TALL MEADOW OAT GRASS (AVENA ELATOR)—This produces an abundant supply of foliage, and is valuable for pasturage on account of its early and luxuriant growth. It is recommended for hay, and shoots up very quickly after being cut, and produces a thick crop of aftermath, which also makes it valuable as a soiling crop. Sow three bushels to the acre. Weight, 14 pounds per bushel.

ENGLISH PERENNIAL
RYE GRASS (LOLIUM PERENNE TENUE)—A highly esteemed grass in Europe, either
for lawns or pasture. On good
soil it yields a large return of
valuable forage. For pasture sow about two bushels to the acre, and
for lawns about three bushels.

Weight, 20 pounds per bushel.

MIXTURE OF GRASS AND CLOVER SEEDS FOR PERMANENT PASTURAGE—The mixtures are composed of a suitable selection of natural grasses and clovers best adapted for permanent pasture, and the kinds, as well as the quantities, are regulated according to the nature of the soil, situation and purpose for which they are sown. When ordering please state whether the soil is light, medium or heavy. It will take three bushels to sow one acre. Weight, 14 pounds per bushel.

GRASS MIXTURES FOR HAY—In our grass mixture only those species are used that bring the period of blossoming of most of the plants at the same time. They are rich and nutritive, and will make the best of hay if cut in season and properly cured. It will take three bushels to sow one acre. Weight, 14 lbs. per bushel. Light soils, lb, 30c; bush, \$3.75. Medium soils, lb, 30c; bush, \$4.00. Heavy soils, lb, 35c; bush, \$4.25.

CLOVER SEEDS.

Mammoth Clover.

RED CLOVER (TRIFOLIUM PEATENSE)—This invaluable plant should justly be placed at the head of the list. It succeeds on any soil of moderate fertility if sufficiently dry. May be sown in autumn or winter at the south or in this latitude upon the snow immediately previous to its disappearance, by which the seed is distributed with regularity, and carried down into the crevices of the soil. From 15 to 20 pounds of good seed is required for an acre. Weight, 60 lbs. per bushel.

MAMMOTH RED, OR SAPLING CLOVER—This variety grows five or six feet high and is used almost exclusively for plowing under for manure. Its stalks are so coarse and large that the stock will eat only the leaves. Sow at the rate of 8 pounds per acre. Weight,

will eat only the leaves. Sow at the rate of 8 pounds per acre. Weight, 60 lbs. per bushel.

WHITE DUTCH CLOVER (T. REPENS)—An excellent pasture grass, forming, in conjunction with the Kentucky Blue Grass, the finest and most nutritious food for sheep and cows. Its flowers are also a favorite resort for the honey bee. It succeeds on all rich clayey lands, if not too wet. From 10 to 15 pounds for an acre Weight, 60 lbs. per bushel.

Alsike Clover.

Sanfoin Clover

ALSIKE, OR SWEDISH CLOVER (TRIFOLIUM HYBRIDUM)—A native of Sweden, perfectly hardy, does not heave in winter or spring from frost; stands drouth well, and is in many respects superior to the common red variety—It affords a large return in hay, is excelent for soiling, and for bees it is unsurpassed. When the plant is once established it will remain for a great many years in full vigor, and produce annually a great quantity of herbage of excellent quality. Sow in spring or fall, about 8 or 10 lbs. per acre. Weight, 60 lbs. per bushel.

CRIMSON TREFOIL, OR SCARLET ITALIAN CLOVER (TRIFOLIUM INCARNATUM)—
This is an annual variety in common use in Italy and the south of France for feeding green. Indeed, it may be said the stock in those countries is largely sustained during the summer months by this. The yield in fodder is immense, and after cutting, it at once commences growing again and continues until severe, cold, freezing weather. In warm climate, 4 or 5 cuttings are maded during the season. It grows about 1 foot high; the roots are nearly black; leaves long, blossoms long, pointed, and of a very deep red, or carmine color, Makes good hay. Sow in April or May, 10 lbs. of seed per acre. Weight, 60 lbs. per bushel. 60 lbs. per bushel.

ALFALFA, OR LUCERNE.

The Grandest Hay and Green Forage Plant Ever Introduced.

Illustration Showing Wonderful Root Growth of Alfalfa.

piles, one forkful in each pile, to cure. Weight, 60 lbs. per bushel.

nt Ever Introduced.
This is the best forage plant that can be
grown — it will produce more forage per
acre, either green or
dry, than any other
known clover or grass
— and is being more
extensively planted
every season. The reason why it is meeting
with such universal
favor are many, but
can be summed up as
follows:

can be summed up as follows:

IT SUCCESSFULLY BESISTS THE FIERCEST DEOUGHT. In the dryest weather when every blade of grass withers for want of moisture, Alfalfa stands up as fresh and green as in the spring.

IT IS PROOF AGAINST OUR SEVEREST WINTERS, EXCESSIVE TAINS and snows—the long continued freezing weather of, winter do not af-

er of winter do not af-fect it in the least; if the soil is well drained it will succeed, and for many years continue to flourish and pro-duce wonderful crops of the richest hay.

IT IS ADAPTED TO DRY AND SANDY SOILS

IT IS ADAPTED TO DRY AND SANDY SOLEs where other plants fail to grow, as well as those that are deep and rich. Its roots often measuring 20 to 30 feet in length, force their way down deep into the subsoil in search of moisture, and plant food that cannot be reached by any other plant.

IT IS "PERPETUAL LIFE"—a successful stand will last from 10 to 12 years, constantly yielding heavy crops which may be first cut in May, a second crop in July, a third crop in August, and, with a good curing season, a fourth crop can sometimes be harvested, yielding 2 to 3 tons of the most nutritious hay at each cutting.

All in all, it is the grandest forage plant on earth, and cannot be too highly recommended.

How to Sow the

How to Sow the Seed, Etc.

Sow early, from 20 to 30 lbs. of seed per acre. Some seedmen recommend at the rate recommend at the rate of 10 to 12 lbs. of seed per acre. This is a fatal error, and hasbeen the primary cause of several failures in obtaining a good stand that we know of. It must be seeded heavy in order to get a good stand and have a fine quality of hav.

of hay.

Cut when in full bloom, rake into winrows and let dry until the leaves, if roughly handled, are inclined to fall off, then lay in

MILLET.

GOLDEN WONDER MILLET—Truly a wonder; grows to a height of five to six feet, stalks measuring at the butt about ¼ inch, and covered with broad leaves (which resemble those of corn) its entire length, yielding from ten to twelve tons of fodder per acre, which is as easily cured as clover hay. The heads measure about fifteen inches in length, and yield an enormous crop of seed. If grown for seed it should be planted and cultivated like corn, in rows three feet apart and from twenty inches to two feet apart in the row, planting from five to seven seeds in the hill. For fodder purposes sow broadcast and cut before the seed is ripe; no better food than this Millet can be found for poultry, swine, calves and cattle; not recommended for horses, as it is like fiax, too heating. GOLDEN WONDER MILLET-

GERMAN, OR GOLDEN MIL-LET—Grows three to five feet high; heads closely condensed; spikes very nu-merous; seeds round, golden yellow, in rough sheaths. Sow 30 to 50 pounds per acre. Weight, 50 lbs. per bushel.

COMMON MILLET (PANICUM MIL-COMMON MILLET (FANCUM MILLET LACEUM)—Very early; grows two to three feet high; foliage broad. Sow in drills or broadcast from May 1st, to June 20th, if for seed, or until the last of July for hay. For grain, sow in drills, use 30 to 50 lbs. per acre. If for hay, sow broadcast 30 pounds. Weight, 50 lbs. per bushel. bushel.

HUNGARIAN GRASS (PANICUM GERMANICUM)—A valuable forage plant, withstands drought, and yields well on light soil. Sow broadcast at the rate of 34 to 48 pounds to the acre, and cultivate the same as Millet. Weight, 48 lbs. per bushel.

German, or Golden Millet.

SEEDS OF HONEY PLANTS.

Each year the demand increases for seed of Honey Plants, proving conclusively that it pays to grow them for that purpose. The following list includes all the principle varieties.

HONEY, OR BEE CLOVER (MELILOTUS CŒRULEUS)

SPIDER PLANT

SIMPSON HONEY PLANT

WHITE BOKHARA CLOVER (MELILOTUS ALBUS ALTISSIMUS)

BORACE BUCKWHEAT ALSIKE CLOVER

TREE, FRUIT AND HEDGE SEEDS.

Evergreen Tree Seeds.

ARBOR VITAE, AMERICAN (THUJA OCCIDENTALIS)-Useful for hedges and wind breaks

ARBOR VITAE, CHINESE (THUJA OBIENTALIS)—Very ornamental for lawns and hedges. ARBOR VITAE, GOLDEN (THUJA ORIENTALIS AUREA)

CYPRESS, SPREADING (CUPRESSUS HORIZONTALIS)

CYPRESS, UPRIGHT (CUPRESSUS PYRAMIDALIS)

FIR, BALSAM (PINUS BALSAMEA)

FIR, SILVER (PINUS ABIES)

LARCH, EUROPEAN (LARIX EUROPEA)—This variety is of great value for forest planting.

PINE, AUSTRIAN (PINUS AUSTRIACA)—A native of Europe. A very popular variety

PINE, SCOTCH (PINUS SYLVESTEIS)-

PINE, WHITE OR WEYMOUTH (PINUS STROBUS)—An old, well known and useful tree.

RED CEDAR (JUNIPERUS VIRGINIANA)—Grown in all sections, very valuable timber, a fine ornamental tree.

SPRUCE, HEMLOCK (ABIES CANADENSIS)—A well-known evergreen tree of high northern latitudes.

SPRUCE, NORWAY (PICEA EXCELSA)-It is easily transplanted or grown from seed.

SPRUCE, WHITE (ARRES ALBA)—Only for the north, timber valuable for ship masts.

Forest and Deciduous Tree Seeds

ALDER, EUROPEAN (ALNUS GLUTINOSA)—Grows rapidly in a damp soils; thirty to eighty feet high.
ASH, AMERICAN, WHITE (FRAXINUS AMERICANA)

ASH, EUROPEAN (FEAXINUS EXCELSIOE—Desirable for warm climates and dry loam soils.

BEECH (FAGUS SYLVATICA)
BIRCH, WHITE (BETULA ALBA
BOX ELDER (ACER NEGUNDA)
CATALPA, HARDY (CATALPA SPECIOSA)—The most valuable tree for prairie planting.

SUGAR MAPLE (ACER SACCHARINUM)—This is the great sugar tree of America, and its yearly product of sugar and syrup amount to over ten millions of dollars in value.

MAPLE, SOFT OR SILVER LEAVED (ACER DASYCARPUM)
—Seed ready by the end of May.

MAPLE, BUTTONWOOD or SYCAMORE (ACER PSEUDO-PLATANUS)—A well known maple.

MULBERRY, RUSSIAN—This tree is valued for its fruit and for its timber, which makes valuable posts and stakes, and being hard, elastic, close-grained and susceptible of a fine polish is used largely in cabinet work.

TREE OF HEAVEN (ALIANTHUS GLANDULGERS)—It has been

cabinet work.

TREE OF HEAVEN (ALIANTHUS GLANDULOSUS)—It has been quite extensively planted in some of the western states, and is known for its extremely rapid growth.

Seed for Hedges.

BLACK OR YELLOW LOCUST (ROBINIA PSEUDOACCACIA)

HONEY LOCUST (GLEDITSCHIA TRIACANTHOS)-This is a large

and handsome tree.

OSAGE ORANGE (MACLURA AURANTIACA)—One of the most valuable of Hedge plants.

HAWTHORN (CRATÆGUS OXYACANTHA)

BUCKTHORN (RHAMNUS CATHARTICUS)—This makes a strong, thorny Hedge, adapted to the northern and middle states,

Fruit and Nut Seed.

APPLE (PYRUS MALUS)—Apple seeds do not reproduce the same varieties, but an inferior, though hardy stock. Upon the stock thus raised from seed or grafted or budded the cuttings of such varieties as are desired. The seed can be planted in good soil at any time during the winter in the south, or early in the spring in the north, in rows eighteen inches apart. When one year's growth has been made, they can be taken up and re-set one foot apart in rows three feet apart. Two year's growth is usually sufficient to make them large enough to graft and remove to permanent place in orchard.

CHERRY, MAHALEB (CERASUS MAHALEB)—This variety is considered the best stock upon which to graft the choicer sorts.

CHERRY, MAZZARD (CERASUS COMMUNIS)—The common or ordinary variety of Cherry is useful alone for grafting purposes.

PEAR (PYRUS COMMUNIS)-Sow the seed thickly in spring, in

PLUM (PRUNIS COMMUNIS)—The directions given for planting Apples will also apply to Plums, except the pits should be planted

Apples will also apply to Fluins, except the pits should be planted farther apart in the row.

PEACH (Amygdalis Persica)—Peach stock are raised by planting the stones two or three inches deep, in the spring. The after treatment is about the same as for Apples.

QUINCE (Cydonia Communis)—Quinces generally produce the same variety from seed, but occasionally vary. The culture from seed is the same as for Apples.

is the same as for Apples.

BLACK WALNUT—This is one of our most valuable timber trees, producing the highest priced lumber of any. The demand for home consumption and for exports has been so great that it has almost denuded our forests of this splendid tree.

Small Fruit Seed.

Currant Seed—Large varieties, mixed Gooseberry Seed—Large, English, mixed Raspberry Seed—Finest sorts, mixed Strawberry Seed—Large varieties, mixed

LATHYRUS SILVESTRIS WAGNERI.

(Flat Pea), Wald Ptatterbse.

The best Forage Plant for Poor, Sandy or Gravelly Soil.

This new Forage Plant has been experimented with in Germany and France for the last 30 years, and is now a pronounced success. It belongs to the Vetches and Tares, and is described as an everlasting Pea. The following is a description of Agricultural papers:

"This Plant has all the valuable traits of red clover or lucerne, without showing any of defects (such as causing bloating in cattle when fed green carelessly, or the heaves in horses when hay is given dusty), and surpasses them in every valuable essential of a fodder plant. It will endure at least sixty to seventy years on the same spot without necessitating a new seeding. It grows on any soil free from stagnate water. Where no other forage plant will live it flourishes with undiminished vigor and exuberance, scarcely needing rain after it is once well established the second year. After that time it needs no further care except mowing and gathering. It produces heavy crops, averaging about four tons per acre of cured hay. Its nutritive qualities twice exceed those of red clover or alfalfa, weight for weight; careful investigations made at several experimental stations, showing that the two latter plants contain only 10 or 12 per cent of protein or albumen, while this improved lathyrus contains from 24 to 30 per cent of these valuable nutritive substances. Cattle, as well as horses and hogs, eat it with avidity. The yield of milk from coas well as horses and hogs, eat it with avidity. The yield of milk is nearly doubled. The use of its hay as a provender is also said to afford a preventive or cure against murrain or spleen diseases."

Messrs. O. Clute and F. B. Mumford of the Michigan State Agricultural College, who have experimented with this new Fodder Plant make

Messrs, O. Clute and F. B. Mumford of the Michigan State Agricultural College, who have experimented with this new Fodder Plant make the following report:

the following report:

1st—It germinates and reaches the surface in from 17 to 28 days. 2d—

It grows slowly at first after reaching the surface, and needs care to keep weeds down. 3d—It makes, on very poor, unimproved sandy soil, a top growth of six to eight inches and a root growth of 12 to 15 inches, the first year. 4th—It makes on sandy soil that has been cultivated and improved a top growth of 12 to 15 inches, and a root growth of 18 to 24 inches, the first year. 5th—The tops are not easily cut down by frost. The roots go through the winter well. 6th—The roots are thickly supplied with tubercles. 7th—One year old plants transplanted in the spring to sandy soil, gave at the rate of 10,406 pounds of green forage per acre. 8th—It does not bloom the first year. With us the blooms, pods and seeds have been few the second year. 9th—Cattle eat the green forage readily.

The flat pea promises well for the sandy soils near the Great Lakes.

The flat pea promises well for the sandy soils near the Great Lakes, where a perennial forage plant is needed, that will not be killed either by severe frosts or by protracted drouths, that will yield good forage for all farm stock, and at the same time has valuable qualities as a fertilizer

Directions for planting the seed are given as follows:

Sow in April or May on well prepared ground in drills about 1 to 2 feet apart, seeds about 2 to 3 inches deep, about 2 inches apart in the drills and cover well; keep well cleaned from weeds afterwards. The plants can be transplanted either in spring or fall on any kind of soil, even on rocky ground, but not on WET lands.

BARLEY, RYE, WHEAT AND OATS SEEDS.

TERMS—Cash with order. Prices subject to fluctuation. Two-Bushel Bags, 20c extra, each.

Express or freight charges always to be paid by the purchaser. If wanted to be sent by mail, postage must be added at the rate of 10c per pound.

Seed Barley.

MANSHURY--Is one of the very best six-rowed Barleys grown, with kernels plumper, fuller than the best Scotch Barley, while for malting it is the very best known. It is early in ripening, which helps it to fill well, thus it always fills plump. Is six-rowed, has a strong, upright straw that makes it easy to harvest, and yields from fifty to eighty bushels per acre. The heads of this Barley are very long, and contain from 75 to 100 great, plump, heavy kernels of grain, weighing over 50 pounds to the measured bushel.

Over 50 pounds to the measured bushel.

BLACK BARLEY-Weighing 62 pounds to the measured bushel. Wonderfully productive, and of great value for feeding and fattening cattle and hogs. Among the advantages that may be claimed for this new Barley is, that it is a much surer crop than corn, especially in the northwest; that it is exceedingly prolific, having yielded 180 bushels of shelled Barley from two bushels of seed sown, a return of fifty-four fold, and that it is MORE NETRITIOUS THAN CORN.

Seed Rye.

RYE, WINTER

RYE, SPRING-This grain is often planted by the farmers especially for the paper makers, who prefer it to any other. The straw is shorter and stiffer than the winter variety, and is always easily secured, while the grain, although smaller, is of equal value.

Spring Wheat.

SASKATCHEWAN FIFE—Pronounced by millers the best No. 1 Hard Amber Wheat ever introduced. In vigor of growth, productiveness, earliness, freedom from smut, and stooling propensities it is unequaled; yields from 30 to 50 bushels per acre, weighing from 62 to 65 lbs. per measured bushel.

VELVET CHAFF, BLUE STEM—This is a remarkable semihard, Spring Wheat, yielding extremely well in soft wheat states. No soft wheat will give better satisfaction than Velvet Chaff Blue Stem, the peculiar blue bloom from which it derives its name disappears as the wheat ripens, the stem and straw assuming a golden yellow, entirely free from rust, grains largely of fine shape and color.

WHITE FIFE—This new hard Spring Wheat came from northern Minnesota. It is a smooth wheat, very stiff straw, of medium height. Does not smut, rust or blight. Grains resemble Saskatchewan Fife in shape, nearly white, considered by our millers a better wheat for milling purposes, owing to its light color. It has outyielded all other varieties here the past season. Those who raise wheat should give this new variety a trial.

WELLMAN FIFE—A semi-hard Spring Wheat, especially adapted to soils of ordinary richness. This wheat has beaten the Saskatchewan Fife and Volvet Chaff, Blue Stem, wherever they have come in competition with it. It has longer straw and heads than the Saskatchewan Fife, but not quite so hard, which is in its favor as far as its production is concerned in the wheat region south of the northwest.

WINTER WHEAT—We have growing now the following varieties: Red Turkey, Fulcaster, Highgrade, Nigger, New Monarch, Golden Cross, Red Clawson, Jones' Whiter Fife and others. Will be pleased to quote prices next fall in time for sowing.

Seed Oats

LINCOLN—After two years trial has proven itself the most popular of any oat yet introduced. We call attention to the following special points of excellence. Ist—It is very productive, having in all instances yielded more to the acre than any other sort grown in the same locality, in one case having yielded 174 bushels from a single bushel of seed. 2d—It is very early. 3d—It has thus far proven itself rust proof. 4th—It stands up better than any other sort. 5th—It is best for feeding on account of its thin hull, heavy meat and soft nib. 6th—It is best for Oatmeal or grinding for the same reasons. Every farmer should secure at least enough of this oat to grow his seed for the next year.

VICK'S AMERICAN BANNER—This wonderful oat has exceeded the expectations of all who have tried it; and has done remarkably well the last season. Notwithstanding the very unfavorable season it yielded as high as 100 bushels per acre. It grew five feet high with long branching heads, filled with long, plump, thin-hulled grains, remarkably stiff straw; ripen very early and weigh over 45 pounds per level bushel. It requires two bushel of seed per acre.

WELCOME—This variety weighs 40 pounds per measured bushel. They are claimed to be the most productive variety in cultivation, and stood heavily, with extra strong, straight straw, standing well; succeeding in a wide range of climate and under a great variety of soils and methods of culture.

WHITE WONDER—The oat wonder, cropping enormously throughout the United States. This oat is a strong growing, prodigal-stooling, vigorous, early variety.

WHITE BONANZA—One of the finest varieties in cultivation and yields extraordinary crops. It is very early; stiff straw; grows from four to four and one-half feet high, heads remarkably heavy; grains short and plump, resembling barley in shape, and has never rusted or fallen down on the richest soil; weighs from 40 to 45 lbs. per level bushel, and only requires one and one-half to two bushels of seed per acre.

THE BALTIC WHITE—This entirely new and distinct oat which was offered for sale in America for the first time four years ago, comes from the borders of the Baltic Sea in Sweden, where it is considered the very best of all Swedish varieties. In manner of growth they are different from any other variety, being neither a side nor sprangle oat, but growing closely and evenly all around the main stalk. It is very stiff in straw, standing up well and entirely free from rust or smut, grain exceedingly large, plump, heavy and handsome, weighing 45 bs. per measured bushel. It is one of the heaviest croppers known and yielded the past season 100 bushels per acre.

BLACK RUSSIAN—After repeated trials and comparisons we consider this the best Black Oats in existence. It is exceedingly prolific, yielding 80 to 100 bushels per acre of measured oats. It is perfectly hardy and can be sown in the fall. The grain is plump and heavy, weighing 43 lbs. to the struck bushel. This oat has been grown in this part of the country a good many years and has always received favorable reports.

THOSE WHO DESIRE TO BUY SEED BARLEY, RYE, WHEAT OR OATS IN LARGE QUANTITIES WILL SAVE MONEY BY WRITING US FOR SPECIAL PRICES

SELECTED FIELD SEED CORN.

The stocks we offer have been properly curred and carefully selected for seed stocks. In our list will be found all the standard sorts, as well as the newer varieties of recognized merit; so nized merit; so nized merit; so thatour customers thatour customers will be enabled to choose Seed Corn of the desired type suitable to soil and climate. The cost of Seed Corn is but a small part of the loss to the planter in case it proves poor and unreliable: hence planter in case it proves poor and unreliable; hence it behooves all to use only the best. We invite every farmer into whose hands our catalogue may fall to give our Nebraska grown Seed Corna trial. WRITE FOR SPECIAL RATE ON LARGE LOTS.

We have given every variety of our Seed Corn, as is our invariable custom, the most thorough sprout-ing tests, and find the germinating quality of each sort to be a num-

GODDARD'S
KING OF THE
EARLIEST—The
great hog and cattle feeding corn.
This is the earliest yellow dent corn in cultivation. Stocks grow six to seven feet high, ears seven to nine ears seven to nine inches long, very deep, soft grain, small reb cob; it ripens in eighty days from planting, being a week to ten days earlier than the "Pride of the North," and "Yellow Canada Flint." This corn will mature in any Filint." This corn will mature in any part of the country where it is possible to grow flint varieties, and is a valuable variis a valuable variety for the extreme north and for feeding purposes. For Nebraska and Kansas it is especially desirable, as it reaches maturity before the hot, blighting wind set in.

Goddard's King of the Earliest.

RILEY'S FAVORITE YELLOW DENT CORN—We obtained our seed of this early and prolific corn from the originator. It weighs sixty pounds per level bushel. Grains are large, deep and soft, with eighteen to twenty-eight rows on a very small cob. Stalks eight to ten feet high, producing generally two good ears from eight to ten feet hong which carry their size well from butt to point, and husks and shells remarkably easy.

IMPROVED PRIDE OF THE NORTH (Dent)—This is a larger ear and deeper grain than Pride of the North, and for a northern climate is just what is wanted by every farmer.

EXTRA EARLY DAKOTA DENT—Dakota Dent Corn is the result of a careful selection of the Pride of the North. It can be planted up to the middle of June, and still make ripe corn by middle of September; grows six to eight feet in height, yields well, often having two fair sized ears to the stalk.

EARLY MASTODON—A new early Dent variety, originated in Ohio. The ear is very large and grain deep. It grows strong, rank, rapid, and makes the finest appearing shelled corn, being purely Dent, of two shades of white and yellow. In the American Agriculturist corn contest of 1889 it outyielded all others, making the wonderful record of two hundred and thirteen bushels of shelled corn to the acre.

CHAMPION WHITE PEARL (White Dent)—A white, pure Dent corn. Exceedingly heavy, very compact, very prolific; will grade No. 1 white in any market; can be planted thicker than large corn and bear full sized ears. The stalk is short and thick, roots deeply, ear growing low upon it, standing storms and drouths well,

EARLY CALIFORNIA (Dent)—The grand sweepstakes Yellow Dent Corn—this corn won the grand sweepstakes at the Prairie-Farmer Corn Show for the best Yellow Dent Corn in the United States. The ears are ten to twelve inches long, of uniform size from butt of tip, orange color, deep grains on a small, straight, red cob, averaging from eighteen to thirty rows on the ear.

The impression of the transfer of the far.

THE IMPROVED NINETY
DAYS LEAMING—A Yellow Dent
variety; very small, red cob, with a
deep, long grain of a rich golden color,
matures a crop in ninety days, and
will, if planted by the 1st of June,
under ordinary culture, grow, ripen,
and be fit to husk and crib by Sept. 1.
Very productive, yielding from ninety
to one hundred bushels to the acre.

MAMMOTH CUBAN (Dent)—
It is a wonderfully prolific cropper, as many as five ears having been produced on a stalk. Very early and a remarkably quick grower, it matures in eighty-five days here in Nebraska. Ears average eight inches long and husk very easily. The grains are of medium size, bright orange-yellow on top, a darker color below the dent, from eighteen to thirty-six rows on a bright red cob. bright red cob.

GOLDEN BEAUTY—This variety is the handsomest of all Yellow Corn. The ears are of perfect shape with from ten to fourteen straight rows of brightest golden yellow grains of remarkable size, and filled out completely to the extreme end of the cob. The richness of color and fine quality of grain make it very superior for grinding into meal. The grains are not of a hard, flinty type, neither are they so soft as to be greatly shriveled, as in the Golden Row.

GOLDEN ROW—A very large, moderately late variety of pure, yellow Dent Corn, This has a proven record of 109 bushels and 37 pounds upon one measured acre under ordinary field culture. May be described as follows: Ear very large, from 10 to 16 inches in length; having from 14 to 28 rows. Color golden yellow; grain broad and long and deeply dented, of very best quality; stout stalk and vigorous, very leafy. In short, a variety that cannot fail to give satisfaction. Does well upon all soils. Stands drouth well and roots deeply.

Improved Ninety Days Leaming Corn.

NEBRASKA WHITE PRIZE—Has been awarded the first premium at the Nebraska State Fair for the past nine years. It is an extra early, pure white variety of the Dent family; very productive and exceedingly heavy, maturing in eighty-five to ninety days from the time of planting. It is very even in hybridization and maturity, giving a good grade of corn and the highest price to be realized for it; very prolific, and has yielded 132½ bushels of shelled corn per acre. The grain is extra deep, two of which will more than span the cob, which is very small indeed for the size of the corn.

NEBRASKA MAMMOTH RED—This is the most prolific field corn in cultivation. Ears 12 to 15 inches long, filling out to the extreme end, having from 14 to 28 rows of large, deep red grains. It is medium early and a vigorous grower, reaching 12 to 15 feet in height.

RED COB ENSILAGE CORN—This variety was grown in the large dairy regions of Nebraska last year so immensely as almost to exclude all of the other so-called Ensilage Corns, and the verdict is that it is the best. Every lot is tested and recleaned, hence you buy no cobs or dirt.

LARGE WHITE FLINT, OR EARLY SANFORD—Best

POP CORN.

QUEEN'S GOLDEN-Lb, 10c. WHITE RICE-Lb, 6c. WHITE PEARL-Lb. 6c.

MISCELLANEOUS FARM SEEDS.

Terms:—Cash with *O*rder. Prices Subject to Fluctuation. Two-Bushel Bags, 20c Extra, Each.

Express or freight charges always to be paid by the purchaser. If wanted to be sent by mail, postage must be added at the rate of 10c

BUCKWHEAT.

Buckwheat should be sown about the middle of June, broadcast, at the rate of from one to three pecks per acre. The average yield is from twenty-five to thirty bushels per acre. It should be threshed as soon as dry, on the ground or barn floor. If allowed to stand in mass it quickly gathers moisture.

NEW JAPA-NESE BUCK-WHEAT-We ad-vise all who are growers of Buck-wheat to give this new and distinct wheat to give this new and distinct Japanese variety a trial in preference to any other variety, whether it be for milling, for the apiary or aviary. A glance at our illustration will show that the kernels are at least twice the size of those of any other variety, and of a shape peculiar and distinct, being a rich dark shade of brown. Flour made from it is equal in quality if not superior to that of any other Buckwheat, and as the yield shows it is enormously prolific. It ripens a week earlier than the Silver Hull and yields two or three times as much.

SILVER HULLED—A greatly improved variety. It is in bloom longer, matures its crop sooner, and yields twice as much as the ordinary sort. The husk is very thin; the grain is rounder, of a beautiful light gray color; is claimed to save 15 to 20 per cent in flour above the comm

COMMON-The old, well-known sort.

NON-SACCHARINE SORGHUMS.

These varieties bear dry weather well. When corn will wholly dry weather well.
When corn will wholly
fail for want of rain at
a certain stage, these
plants simply stop and
wait for rain, and then
go on and make their
full yield. In weight
of grain they will make
more per acre than the
same land will make
of corn. In the way of
dry forage they make
enormous returns, at
a cost less than the
cost of gathering alone
of corn fodder. Their
cultivation is as simple as that of corn.

JERUSALEM
CORN—This corn is
pronounced the best
and surest grain crop

pronounced the best and surest grain crop for dry countsies and seasons, and better than the Kaffir Corn, Dhoura and Mille Maize. It grows about three feet high, makes one large head on main stalk and several smaller heads on side shoots; have seen as high as eight heads on one stalk. The grains are pure white. Three pounds will plant an acre. acre.

KAFFIR CORN—A variety of Sorghum, cultivated for both forage and grain, growing from four and a half to six feet high, is stalky, erect, and has wide foliage. Kaffir Corn has the quality common to all Sorghums of resisting drought. Sow in rows three feet apart, five to six pounds to the acre.

WHITE MILLE MAIZE OR BRANCHING DHOURA—Of South American origin, already well advertised and distributed. Valuable as a forage plant and for its grain, having great capacity to stand drought. It can be cut and fed at any stage, or cured, when heading out, for fodder. Four or five pounds to the acre.

DHOURA OR EGYPTIAN RICE CORN—A wonderful fodder plant. If sown in spring while the ground is moist, it will mature without a drop of rain. It is much sweeter than corn stalks, and cattle, horses and hogs eat it ravenously. It stands firm against the highest wind, roots deep, and will endure without injury, a drought that sometimes ruins corn. Four or five pounds to the acre.

CANE OR SORGHUM.

Well known everywhere. Plant in warm, corn soil, rather poor than rich, or at least manure with mineral fertilizers, as ashes, bone meal, potassic manure, etc., in drills 3½ feet apart to let the sunlight reach the stalks and lower leaves to perfect the development of sugar. Sow about five pounds of seed per acre for syrup and thirty pounds for fedder. fodder

EARLY AMBER CANE—This popular and well-known variety is the earliest and makes the finest quality of amber syrup and good sugar. Succeeds well from Texas to Minnesota.

EARLY ORANGE CANE—A well-known variety, well adapted for the south; it is from eight to ten days later than the Early Amber; produces a syrup of excellent quality.

SUGAR-CANE FOR FODDER—We have seed of both of above named varieties which has not been selected with such care, but which will grow and prove satisfactory for fodder purposes.

BROOM CORN.

There are many farmers who might make this a very prolific crop; an acre will give about five hundred-weight of broom and nearly forty bushels of seed, worth nearly as much as oats for feed. It is frequently planted in drills three and a half feet apart, leaving the plants six inches apart.

WILSON'S IMPROVED TENNESSEE EVERGREEN—The Improved Evergreen Broom Corn grows about 8 to 10 feet high, stands up well and is entirely free from crooked brush. The fibre is long and fine and will always command the high-

GENUINE DWARF BROOM CORN—Growe from three to four feet high, with straight, smooth brush; principally used for making whisks and brushes

MISSOURI EVERGREEN—Is a favorite of Kansas, Nebraska and Missouri.

CALIFORNIA GOLDEN—An excellent standard variety, grows a very fine brush of good length, and is free from the large center stem.

HEMP.

If raised for manufacturing must be sown broadcast, at the rate of one-half bushel to the acre; if for seed, it should be planted in hills four feet apart, and the plants thinned out to three or four of the most vigorous stems in each hill.

FIELD PEAS.

These are sown for marketing dry, for split Peas or for fodder for stock. For these purposes they are sown on land in fair tilth and in good heart, plowed in the autumn or early as possible in the spring, at the rate of 2½ bushels to the acre, either broadcast or in drills. Sust the rate of 1½ bushels to the acre, with an equal quality of oats, they are cut and cured with oats either as hay or to be threshed, when both grains are bound together.

WHITE CANADA FIELD
GREEN FIELD

TEOSINTE-Of South American origin. Throws up from fifteen to thirty stalks from a grain, and on rich land reaches eleven feet in height, a solid mass of foliage. In appearance sometimes resembles Indian Corn, but the leaves are much broader and longer, and the stalks contain sweeter sap. Cut for green feed in any stage it is found good and wholesome, and the second and third growth comes promptly in equal vigor and abundance. Nothing equal to it for an enormous mass of forage. Plant in April, five or six feet by three, and cultivate as corn. Two pounds per acre.

SPRING VETCHES, OR TARES.

Vetches are grown for a forage crop. They can be cheaply raised, fed green, cured or ensilaged. In Scotland and England they are grown largely for this purpose, and where land is not adapted to hay, or is expensive, or pasturage is poor or costly, it will pay to grow Vetches as a forage crop. Sow two to three bushels per acre.

PEANUTS.

Peanuts can be cultivated as early as potatoes. They yield largely and are a paying crop. Planted in April, they ripen in August, and planted as late as July 1st to 18th, they will mature full crops before frost.

MISCELLANEOUS.

CHAMPION FOOD—Is a skilfull combination of the most nutritious, appetising and blood-purifying Seeds, Roots, Barks and Herbs—a highly concentrated food. It will prevent the spread of Hog Cholera; will make cows give an additional and better quality of milk, and will also improve and strengthen the Digestive Organs of all kinds of stock, and will keep them in healthier condition on less grain, than they would be if grain alone was used. Give it a trial.

FERTILIZERS.

Commercial Fertilizers are sure to come into more general use in the west as fast as they are tried. Their quick and direct action commend them to the gardener. A customer who once buys almost invariably continues its use. The enormous quantities sold in the east give the best evidence of its utility and value to the gardener and farmer. The quantity to use per acre depends on the crop to be cultivated and condition of soil.

TRUCKER'S DELIGHT—Analysis: Ammonia, 6 to 8 per cent; available Phos. Acid, 8 to 9 per cent; Sulph. Potash, 3 to 4 per cent. Harrow it in, using 300 lbs. per acre. The best fertilizer for vegetables is one that is soluble and furnishes the food quickly, and only such nourishment as will be absorbed in vine, stalk, leaf and large fruitage. These elements are united in perfect proportions in the Trucker's Delight. It is put up in bbls., odorless, clean to handle, and reasonable in price. Its application is simple. Directions accompany each bbl.

FLAX SEED.

It will pay farmers to buy their flax seed and quit the process of raising it under contract for the mills. It is a quick crop to grow and always finds ready sale at a fair price.

RUSSIAN FLAX—A great improvement over the common American flax; seed double the size; yields 12 to 14 bushels per acre.

WILD RICE.

As an attraction for wild fowl it cannot be equaled. In large ponds and lakes it purifies the water and affords a refuge for the small fry from the large fish, also furnishing them plenty of food from the animalcules upon its stalks. For planting in fish ponds it is associately desirable. is especially desirable.

13. Argemone—Mixed; all best colors...... 5c

No family of plants bears such distinct marks of progress as the Aster, and none are more eagerly sought. An almost endless variety, always reliable, it is not strange that they should become a necessity. The seed may be sown during the months of March and April under a frame or in the greenhouse and transplanted in May. However, as the Aster is essentially a fall flower and the later blossoms are the finest, it is better to sow the seed in a frame, thinly, early in May, and transplant when strong enough, setting the plants out from 6 inches to 1½ feet apart, according to the size and habit of the variety.

15. Aster, Victoria Needle. Many colors, choice mixed... 10s

16. Aster, German Quilled-Many colors; choice mixed... 5

17. New Comet Aster-Resembling the Japanese Chrysanthemum in shape of flowers; the petals are of a lovely delicate pink color bordered with white, soright pink, light-blue with white borders and other colors mixed.

GARDEN AND MISCELLANEOUS TOOLS.

THE "PLANET JR." COMBINED HORSE HOE AND CULTIVATOR.—Probably no other cultivating machine is so widely known as the "Planet Jr." Combined Horse Hoe and Cultivator, for it is in use throughout the civilized world. It is so strongly built as to withstand an increditable strain, yet it is light and easy to handle.

THE "PLANET JR." No. 8, HORSE HOE AND CULTIVATOR—This new tool has many important improvements and describe same as follows:

The Frame is longer than usual and about one and a half inches higher, making a tool that will not clog easily.

The Standards are formed up hollow with round threats of stiff steels they notice and an analysis of stiff steels they notice and an analysis of stiff steels they notice as a stiff steel they notice as a stiff steel they notice and an analysis of stiff steels they notice as a stiff steel they not stee

will not clog easily.

The Standards are formed up hollow with round throats of stiff steel; they polish quickly and free themselves readily from obstructions, and they clasp the frame and strengthen it.

The Depth is under perfect control by means of a new lever wheel and the new patented depth regulator, which are moved instantly in unison by a single lever, making exact work, steadying the machine and relieving the operator.

The Expander. This is an entirely new pattern, superior to all other forms; exceedingly strong, simple, accurate and positive in all positions.

Handles and Braces. These are also absolutely new and the most effective and stiffest combination known, at once making the tool rigid, yet allowing every adjustment of handles in height and sidewise.

"The Planet Jr." No. 6 All Steel Horse Hoe and Cultivator Combined, weight

The "Planet Jr." No. 5 All Steel Horse Hoe and Cultivator, weight 70 lbs. The "Planter Jr." No. 4 All Steel Horse Hoe and Cultivator, weight 60 lbs.

The "Planter Jr." No. 6 All Steel Cultivator, weight 65 lbs'

The "Planter Jr." No. 5 All Steel Cultivator, weight 60 lbs.

The "Planter Jr." No. 4 All Steel Cultivator, weight 60 lbs.

The "Planet Jr." No. 8, Horse Hoe and Cultivator.

THE MARKET GARDENER'S HORSE HOE-It is intend-

be reduced in size for narrow rows; or by taking off the sweep and the center tooth of the pulverizer and replacing the wheel with a pair of steel runners, the tool may be used to strad dle the row and cul-tivate both sides at once.

"Planet Jr." Market Gardener's Horse Hoe.

THE "PLANET JR." TWELVE TOOTH HARROW, CULTIVATOR AND PULVERIZER—Is now offered after thorough and long extended trial as the very best and finest known for its intended

purpose. As a harrow the work done is most thorough and with the teeth turned backwards, it is admirable for trashy ground and leveling, ground and tevering, and for crops just breaking the surface. As a cultivator the work is of the most thorough kind. As a pulverizer, with the attachment as shown in the cut the work.

attachment as shown in the cut, the work is of the finest description. The pulverizer may be reduced in width by taking off the outside teeth or the whole tool can be made to straddle a row by taking out the middle teeth of both the cultivator and pulverizer.

THE "PLANET JR." No. 5 HILL DROPPING SEEDER.—This beautiful new tool will be a delightful surprise to every gardener who tries it. We all know that a garden seed sower that does not drop in hills is fast becoming a thing of the past, for there are but few now who do not wish to plant beans and corn, spinach and salisfy, carrots and turnips, parsips and beets in hills. All crops that are to be grown from seed and then thinned to a regular stand should be planted in hills at just the distance apart the plants are desired; for in drilling, unless the seed is sown unnecessarily thick, there will not always be a plant at the proper spot and the crop is therefore irregular. This means that nowadays a seed sower should drop in hills and at almost every distance apart. The new No. 5, "Planet Jr." drops at 5, 6, 8, 10, 12, 16, 24 and 48 inches apart, and also beautifully in a continuous row. It drops without injury, can be changed from hill to drill or from one distance to another very quickly, and without any changing of bolts, and without any loose wheels or parts so easily lost or mislaid; and a neat, clear index with brass screw regulator and quick cutoff is arranged most conveniently just at the top of the handle.

The new comer is a great favorite, too, because it is unusually large, holding three quarts.

The "Planet Jr." No. 4, Combined Hil Dropping Seeder and Single Wheel Hoe, Cultivator, Rake and Plow.

This is exactly the fine strain of blood that has proven such a marvelous success in the No. 5 "Planet Jr" Hill Dropper. As a drill, the points of difference are: First, that it is smaller in capacity, though still of good size, holding three pints, and that it does not drop at so many different distances apart; however it drops at all the most important distances, at 6, 9, 12, 18, 36 inches. The index is just as fine and accurate and plain, though being a combined tool it is not placed at the top of the handle. It is like No. 5 in dropping in just the same way, just as accurately, and in handling the sn allest paper of seed perfectly and to the last grain; has no loose parts, and is simple, durable and very light running. The drill is quickly detached and the tool frame substituted. It then becomes the most admirable Single Wheel Hoe of the "Planet Jr." family. Has a fine garden plow, two elegantly shaped, new-style hoes, three delightful cultivating rakes, made new form and specially to fit 6, 9, 12, and, using two at once, 14 and 16 inch rows; and a practical leaf guard.

The "Planet Jr." No. 3, Hill Dropping Seeder.

This Drill will sow in a continuous row, in the ordinary way, with the greatest regularity; but its distinctive feature is that it will drop neatly in hills, either 4, 6, 8 12 or 24 inches apart. It opens the furrow, drops in hills or drills, covers, rolls down and marks the next row, all at one operation. The hopper holds three quarts. The wheel is 15 inches high, with a broad face. It is changed in a moment from hill dropping to drill work. It has a rubber force feed, sows equally well whether the hopper is full or contains only a paper of seed, and will not injure delicate seeds, such as radishes, cabbage, etc., which are so often peeled or crushed by drills having agitators or metal feed wheels.

THE "PLANET JR." No. 2 DRILL—Holds 2½ quarts. Will sow with equal ease and accuracy a single paper of seed or a full hopper, covering evenly at any exact depth, and will roll down and mark the next row perfectly at a single passage. It has no cams, levers, brushes, cogs, springs or shapers. It is noiseless, automatic, self cleaning and always reliable.

The "Planet Jr." Combined Drill, Wheel Hoe, Cultivator and Plow.

As a seed drill it is exactly the same as the No. 2, described above, except in size; it holds one quart. The tools sent with each machine are shown in the cut. As a cultivating and hoeing implement it does practically the same range of work as the "Double Wheel Hoe" described below.

THE "PLANET JR." HILL DROPPING DRILL—Has two carrying wheels, 15 inches high and 6 inches apart. Has a rubber double screw agitator and a two-quart hopper. It sows in drills or drops in hills, as desired, either 4, 6, 8 or 12 inches apart, and can be altered from one to the other in an instant. Does not sow when going back-ward or turning at end of row.

The "Planet Jr." Double Wheel Hoe, Cultivator, Rake and Plow Combined.

Has the invaluable feature of tending both sides of the row at once. The wheels can be set 4, 7 or 10 inches apart. It has a pair of hoes, a pair of plows, two pairs of cultivator teeth, a pair of rakes and a pair of leaf lifters, making it capable of every variety of gardener's work.

The "Planet Jr." No. 15 Single Wheel Hoe, Cultivator, Rake and Plow.

Rake and Plow.

This new Wheel Hoe has the advantage of a high wheel with a broad face, of a convenient arrangement of the frame, and a very full set of tools, most of them being of new, special design, such as have been found to perform wheel hoe work in the very best manner. It also has the great advantage of being convertible into a hill dropping and row seeder, by buying the seeder attachment. Price \$4.50.

The tools are: a well shaped garden plow, for plowing, marking out, covering and late cultivation; a pair of neat shield hoes, just right for hoeing in rows 9 to 12 inches, and with the assistance of a cultivator tooth or rake, rows up to 16 inches; a set of three hoes cutting 3%, 7 and 10 inches wide, respectively, just right for 6, 9 and 12 inch rows, and, two together, for rows up to 16 inches. With two arranged side by side, the rakes are just the thing for preparing ground for the seed drill. It has also a practical leaf guard for fallen plants, such as peas, and for wide spreading plants. It raises the leaves and allows perfect cultivation, without injury or increased labor.

It is also sold without rakes and leaf guard. Price, \$5.00. Also plain, having only one pair of hoes and one pair of rakes. Price, \$4.00. The seeder attachment is quickly exchangeable for the wheel hoe frame; it is identical with the "Planet Jr." Hill Dropping Seeder, No. 4, and drops at 6, 9, 12, 18 and 36 inches apart. Price, \$4.50.

Price, \$4.50.

"PLANET JR." SINGLE WHEEL HOE, CULTIVATOR RAKE AND PLOW COMBINED—Is considerably lighter than the double, and is supplied with one pair of hoes, three reversible oldevator teeth, two narrow and one broad, a large garden plow and a

"PLANET JR." SINGLE WHEEL HOE—This new tool is similar to the foregoing, except it has no extras.

"PLANET JR." FIRE-FLY SINGLE WHEEL HOE, CULTIVATOR AND PLOW COMBINED—It is light, strong and adjustable to quite a variety of work. It has two hoes which work either to or from the row, three cultivator teeth and one garden

"PLANET JR." FIRE-FLY WHEEL GARDEN PLOW—This Tool is just the thing for a small garden, it makes the care of a vegetable garden a pleasure.

The New Model Seed Drill.

This new Hand Seed Drill contains several marked improvements over older styles, and possesses every important detail to make it, indicated by its name, a "Model" drill.

Little Gem Seed Drill

McGEE GARDEN HOE AND CULTIVATOR—The feature of this tool lies in the fact that it straddles the row and that the handles can be moved independently of each other. Each handle has one of the knives attached to it and is held steady by a spring, so that the blades can be moved up to or away from the plants if desired. While in use it is not necessary to stop and loosen bolts to adjust it, but sin ply mov your handles in or out and the blades will close so as to cut out all the plants and weeds, or open so as to pass by and leave the plants standing. the plants standing.

LITTLE GEM SEED DRILL—This drill is a complete, practical one in every respect; just the thing for people with a small garden. Makes the drill, drops and covers most seed as perfectly as the most expensive drills, but is not large enough for the coarser seeds, like beans, peas and corn. Weight only 20 pounds.

The Improved A. H. Matthews' Seed Drill.

Sows all kinds of garden Seeds with certainty and rapidity. It opens the furrows, covers the seed, rolls it, and marks for next row at one operation. We do not claim it for a Combined Drill, but as a Seed Sower pure and simple, one of the most reliable.

Space will not permit illustrating and describing all of the "Planet Jr." Tools, but we will gladly send a fully illustrated catalogue any who desire it; and we can supply pron ptly anything ordered. "Planet Jr." goods are standard machines, the best on the marter. We are agents for the state of Nebraska.

THE LITTLE GIANT HAND BROADCAST SEED SOWER-We safe in Saying that this is the Best Hand Broadcast

sate in saying that this is seed Sower in the market. This machine is simple in construction, light, strong and durable, and has a pressed tin distributing wheel, something found in no other seed sower.

It will distribute Flax and Clover Seed thirty-six feet to the round; Wheat fifty feet to the round, Timothy Seed twenty-seven feet to the round; Oats thirty-six feet to the round.

THE GRANGER BROADCAST HAND

SEED SOWER.

An improve-ment over the "Cahoon." Sows on an average six acres per hour. The bag and hop-per will hold about twenty-two quarts.

CONCAVE CUR SEED AND POTATO KNIFE.

KNIFE.
It is thin and right shape to cut to one, two or three eye pieces, fast and not crack the tuber or injure the germs. Give this knifea fair trial and if you are not satisfied that it will pay you to cut your potatoes with it, return to us and we will refund you your money.
